## Events at the Fukushima Daiichi Nuclear Power Plant in Japan

*March 12, 2011 (posted at 4:40 p.m. EST, Saturday, March 12)*

### Key Facts

#### The Incident

Unit 1 of the Fukushima Daiichi nuclear power plant was damaged in a magnitude 8.9 earthquake and subsequent tsunami on March 11. The plant is centered along the shore of the Sendai region, which contains the capital Tokyo.

The plant is a General Electric boiling water reactor 3 Mark 1 design, operated by Tokyo Electric Power Company (TEPCO).

Eleven of Japan's 55 nuclear reactors automatically shut down, as they are designed to do, when the earthquake hit.

After the earthquake and tsunami, there were difficulties powering the cooling system for unit 1 of the Fukushima Daiichi plant. After a buildup of hydrogen gas in the secondary containment structure at the plant, there was an explosion at that reactor on March 12.

The explosion caused a breach in the secondary containment. However, the primary containment that houses and protects the reactor vessel and fuel remains intact and is safe. This structure is made of steel and is extremely robust. The primary and secondary containment are designed to prevent radiation from being released into the environment in the case of an accident. However, TEPCO intentionally vented steam from the secondary containment building in an effort to reduce pressure in that building. For a diagram of the reactor type used at Fukushima Daiichi, click [here](#).

I-2

It appears that as the level of coolant in the reactor vessel lowered, a portion of the top of the uranium fuel rods was exposed. This may have caused zirconium cladding of the fuel rods to react with water to create hydrogen. This hydrogen was vented, then somehow ignited, causing the explosion.

As the explosion did not occur inside the reactor core—and the primary containment was not breached—there has not been a significant public health impact from the release of radiation from the containment structure.

Reactors 2 and 3 at Fukushima Daiichi were shut down in response to the earthquake. Units 4, 5 and 6 had been shut down prior to the earthquake for inspections and scheduled outages.

### **The Response**

TEPCO has been pumping seawater, laced with boron, into the reactor core of Unit 1 of the Fukushima-Daiichi plant to cool the fuel.

Backup diesel generators and batteries have arrived at the Fukushima Daiichi plant. They will be used as an emergency source of electric power to pump water into the reactor core or containment of units 2 and 3 to continue cooling the reactor cores.

The Japanese government has expanded the evacuation zone around the facility to 20 kilometers, or about 12 miles.

TEPCO also is preparing to vent the containment structures at Fukushima Daiichi Units 2 and 3 to reduce the pressure inside primary containment in these reactors and maintain the structural integrity of the containment. Venting reduces pressure in the containment, but can be done in a safe manner.

### **Similar Reactors in the United States**

The General Electric BWR 3 Mark 1 reactor design is used in six of 104 reactors in the United States. Every nuclear power plant is designed, built and managed to prevent radioactive releases, even in the event of natural disasters, operational accidents or security threats.

A variety of measures work together to protect public safety: the design and safety features built into nuclear power plants; the multiple layers of physical barriers that protect the reactor; and highly trained, federally certified professionals who operate the plant safely and know how to respond in the event of emergencies.

I-3

**From:** Operations Center Bulletin  
**To:** OST02 HOC  
**Subject:** FW: NRC IS RESPONDING TO AN EMERGENCY OUTSIDE of the United States  
**Date:** Sunday, March 13, 2011 11:15:47 AM

---

## **THIS IS NOT A DRILL**

The NRC is coordinating its actions with other Federal agencies as part of the U.S. government response to the events in Japan. The NRC is examining all available information as part of the effort to analyze the event and understand its implications both for Japan and the United States. The NRC's Headquarters Operations Center in Rockville, MD has been stood up since the beginning of the emergency in Japan and is operating on a 24-hour basis.

NRC Incident Responders at Headquarters have spoken with the agency's counterpart in Japan and offered the assistance of U.S. technical experts. Two officials from the NRC with expertise on boiling water nuclear reactors have deployed to Japan as part of a U.S. International Agency for International Development (USAID) team. USAID is the Federal government agency primarily responsible for providing assistance to countries recovering from disasters.

U.S. nuclear power plants are built to withstand environmental hazards, including earthquakes and tsunamis. Even those plants that are located outside of areas with extensive seismic activity are designed for safety in the event of such a natural disaster. The NRC requires that safety significant structures, systems, and components be designed to take in account the most severe natural phenomena historically estimated for the site and surrounding area.

The NRC will **not** provide information on the status of Japan's nuclear power plants. For the latest information on NRC actions see the NRC's web site at [www.nrc.gov](http://www.nrc.gov) or blog at <http://public-blog.nrc-gateway.gov>.

### **Two important reminders:**

It is possible that some of us will be requested by colleagues in another country to provide technical advice and assistance during this emergency. It is essential that all such communications be handled through the NRC Operations Center. Any assistance to a foreign government or entity must be coordinated through the NRC Operations Center and the U.S. Department of State (DOS). If you receive such a request, contact the NRC Operations Officer (301-816-5100 or via the NRC Operator) immediately.

If you receive information regarding this or any emergency (foreign or domestic) and you are not certain that the NRC's Incident Response Operations Officer is already aware of that information, you should contact the NRC Operations Officer (301-816-5100 or via the NRC Operator) and provide that information.

---

Hydrogen explosion at Unit #3 at approximately 11 pm; primary containment intact. Confirmed by Tony and John (our 2 guys in Japan). We know there is fuel damage.

#2 unit is stable.

Still no offsite power. Batteries being used (and recharged) and DGs brought in to pump water.

Both #1 and #3 had uncovered fuel for several hours.

Following explosion, telling those who hadn't evacuated to shelter

Neil is here through the night.

comments: I am a foreign correspondent for Network Ten Australia, based in Los Angeles.

We are seeking an informed nuclear expert to speak to on our evening current affairs program, regarding the current situation unfolding in Japan.

I am hopeful that perhaps, in a time where there is much concern and perhaps confusion about the consequences of a nuclear leak.. that a member of your organisation may help lend an expert voice to the conversation, and assist in explaining what this complex situation might mean.

I thankyou for your time in considering this request.

Regards,  
Emma.

March 14, 2011

### **JAPANESE GOVERNMENT ASKS FOR ASSISTANCE WITH REACTOR EVENTS; U.S. GOVERNMENT AND NRC PREPARING RESPONSE**

The Japanese government has formally asked for assistance from the United States as it continues to respond to nuclear power plant cooling issues triggered by an earthquake and tsunami on March 11. As part of a larger U.S. government response, the NRC is considering possible replies to the request, which includes providing technical advice.

Included in a U.S. Agency for International Development (USAID) team dispatched earlier to Japan to assist with the disaster are two boiling-water reactor (BWR) experts from the NRC. They are currently in Tokyo offering technical assistance. USAID is the federal government agency primarily responsible for providing help to countries recovering from a disaster.

The NRC has been monitoring the Japanese reactor events via its Headquarters Operations Center in Rockville, Md., on a 24-hour-a-day basis.

The NRC will not comment on hour-to-hour developments at the Japanese reactors. This is an ongoing crisis for the Japanese who have primary responsibility.

STATEMENT  
BY GREGORY B. JACZKO, CHAIRMAN  
UNITED STATES NUCLEAR REGULATORY COMMISSION  
TO THE  
HOUSE COMMITTEE ON ENERGY AND COMMERCE  
SUBCOMMITTEES ON ENERGY AND POWER, ENVIRONMENT AND THE ECONOMY  
MARCH 16, 2011

Mr. Chairmen, Ranking Members Rush and Green, and Members of the Subcommittees, I am honored to appear before you today on behalf of the U.S. Nuclear Regulatory Commission. Given the events that are unfolding overseas, my remarks will focus on the crisis in Japan, not on the Fiscal Year 2012 budget as was originally planned.

I would first like to offer my condolences to all those affected by the earthquake and tsunami in Japan over the last few days. My heart goes out to those who have been dealing with the aftermath of these natural disasters.

Since Friday, the NRC's headquarters Operations Center has been operating on a 24-hour basis to follow events unfolding at nuclear power plants in Japan. Since the earthquake hit northeastern Japan last Friday, some reactors at the Fukushima No. 1 plant have lost their cooling functions, leading to brief rises in radiation levels. Two NRC experts on boiling-water reactors have already been deployed to Japan as part of a U.S. International Agency for International Development team, and they are currently in Tokyo. Since then, the Japanese government has formally asked for assistance from the United States as it continues to respond to cooling issues at the country's nuclear power plants. Another NRC team is being assembled in response to this request.

Within the U.S., the NRC has been coordinating its efforts with other Federal agencies as part of the government response to the situation. This includes monitoring radioactive releases and predicting their path. All the available information indicates that weather conditions have taken the small releases from the Fukushima reactors out to sea away from the population. Given the thousands of miles between Japan and the United States, Hawaii, Alaska, the U.S. Territories and the West Coast are not expected to experience any harmful levels of radioactivity.

Examining all available information is part of the effort to analyze the event and understand its implications both for Japan and the United States. The NRC has been working with several agencies to assess recent seismic research for the central and eastern part of the country. That work continues to indicate that U.S. plants will remain safe.

U.S. nuclear power plants are built to withstand environmental hazards, including earthquakes and tsunamis. Even those plants located outside of areas with extensive seismic activity are designed for safety in the event of such a natural disaster. The NRC requires that safety-significant structures, systems, and components be designed to take into account the

most severe natural phenomena historically reported for the site and surrounding area. The NRC then adds a margin for error to account for the historical data's limited accuracy. This means that U.S. nuclear power plants are designed to be safe based on historical data from the area's maximum credible earthquake.

The NRC is always attentive to any information that can be applied to U.S. reactors. Our focus is always on keeping plants in this country safe and secure. As this immediate crisis in Japan comes to an end, we will look at whatever information we can gain from the event and see if there are changes we need to make to our own system. However, the bottom line is that we believe our plants are safe.

The NRC will continue to monitor the situation and provide updates via press release and public blog. Our counterpart in Japan is working to control events abroad, and we continue to have faith in its ability to do so. In the meantime, the NRC stands ready to offer further technical assistance as needed. We hope that this situation will be resolved soon so that Japan can begin to recover from this terrible tragedy.

I am here today on behalf of the U.S. Nuclear Regulatory Commission. Given the events that are unfolding overseas, my remarks will focus on the crisis in Japan, not on the FY12 budget as was originally planned.

I would first like to offer my condolences to all those affected by the earthquake and tsunami in Japan over the last few days. My heart goes out to those who have been dealing with the aftermath of these natural disasters.

Since Friday, the NRC's headquarters Operations Center has been operating on a 24-hour basis to follow events unfolding at nuclear power plants in Japan. Since the earthquake hit northeastern Japan last Friday, some reactors at the Fukushima No. 1 plant have lost their cooling functions, leading to brief rises in radiation levels. The Japanese government has formally asked for assistance from the United States as it continues to respond to cooling issues at the country's nuclear power plants. Two NRC experts on boiling-water reactors have been deployed to Japan as part of a U.S. International Agency for International Development team, and they are currently in Tokyo offering technical assistance.

The NRC has been coordinating its efforts with other Federal agencies as part of the U.S. government response to the situation. This includes monitoring radioactive releases and predicting their path. All the available information indicates that weather conditions have taken the small releases from the Fukushima reactors out to sea away from the population. Given the thousands of miles between Japan and the United States, Hawaii, Alaska, the U.S. Territories and the West Coast are not expected to experience any harmful levels of radioactivity.

Examining all available information is part of the effort to analyze the event and understand its implications both for Japan and the United States. The NRC has been working with several agencies to assess recent seismic research for the central and eastern part of the country. That work continues to indicate that U.S. plants will remain safe.

U.S. nuclear power plants are built to withstand environmental hazards, including earthquakes and tsunamis. Even those plants located outside of areas with extensive seismic activity are designed for safety in the event of such a natural disaster. The NRC requires that safety-significant structures, systems, and components be designed to take into account the most severe natural phenomena historically reported for the site and surrounding area. The NRC then adds a margin for error to account for the historical data's limited accuracy. This means that U.S. nuclear power plants are designed to be safe based on historical data from the area's maximum credible earthquake.

The NRC will continue to monitor the situation and provide updates via press release and public blog. In the meantime, the agency stands ready to offer further technical assistance as needed. We hope that this situation will be resolved soon so that Japan can begin to recover from this terrible tragedy.

**To:** Jasinski, Robert; Landau, Mindy; Tobin, Jennifer; Zuberi, Sardar; Ridge, Christianne; Deavers, Ron  
**Subject:** Internal Call Center

**Follow Up Flag:** Follow up  
**Flag Status:** Completed

There is a chance we will start up a small Internal Call Center to answer calls from the public concerned about radiation, etc.

It is not certain, but possible. I'll be looking for help staffing the center. You will have a script to use and will be located in TWFN Fourth Floor conference room.

Please let me know if you'll have availability/interest in doing this.

Mindy – can you spread the word through the Communication Council, too. The more volunteers the better . . .

Thank you,

Holly

**To:** Jim Randle  
**Subject:** RE: voa seeks help checking numbers in story on nuclear industry..  
**Date:** Tuesday, March 15, 2011 1:50:00 PM

---

Jim,

As of 2010, the following figures apply:

- 438 operating reactors in 30 countries (and Taiwan). Five in long-term shutdown, and 54 plants under construction
- In the US, nuclear accounts for about 20% of domestic energy generation

I am not sure that we can procure for you data on the number of plants worldwide that are under some sort of construction; I might try IAEA, as the NRC deals primarily with domestic plants.

For other information we do have on facts and figures, you can peruse our Information Digest here:  
<http://www.nrc.gov/reading-rm/doc-collections/nuregs/staff/sr1350/>

Please let me know if you have any further questions!

Thank you,  
Holly

Subject: voa seeks help checking numbers in story on nuclear industry..

Hi Holly,

Here is the story. The numbers I want to check are:

- total number of nuclear power plants world wide (442?)
- percentage of electricity we get from nuclear plants (17%?)
- number of nuke plants now under construction (65?)
- number of nuke plants now in some part of planning stage (about 350????)
- number of nuclear power plants now in China? (13?)
- number of new plants under construction in China? (27????)
- number of nuclear power plants now in India? (no idea?)
- number of new plants under construction in India? (5????)

Thanks very much for helping me get this story exactly correct.

Cheers and best regards,

Jim Randle

NUMBER:  
TYPE: CN ))

I-77

The crisis at Japan's nuclear power plants is hurting the nuclear industry, as the stocks of companies that build or operate nuclear power plants falls sharply, and the price of uranium fuel declines.

Investor concern follows the temporary closure of some nuclear power plants in Germany, and plans by many nations to closely review safety issues related to earthquakes and cooling systems that are at the heart of the problems in Japan.

Nuclear power provides almost one-fifth of the world's electricity from 442 nuclear power plants. Another 65 nuclear power plants are under construction, and hundreds more are in some stage of planning.

China is planning a major expansion of its nuclear power industry to provide the electricity needed to power its continued economic growth. India also plans expansion.

The United States has 104 nuclear power plants, more than any other nation. But France is more dependent on nuclear energy than most nations, getting about three-quarters of its electricity from nuclear sources.

**Subject:** Oral statement - JCB edits.docx

Josh just called with changes/feedback on the oral statement. He had some specific wording changes that I inserted and/or suggested on the attached. Also, more broadly, he would like the following:

- Add a section about the NRC's role, what we do domestically as a lead in to why we are engaged on Japan
- Praise the NRC workforce, important role they play, dedication, tireless effort
- Response to Japan another example of what I've seen for 6 ½ years

I was packing to leave when he called. I am too tired to be too coherent – if you have time to give it a shot before I come in, the latest is attached. He'd like to get GBJ to sign off tomorrow am.

I-84

AP

STATEMENT  
BY GREGORY B. JACZKO, CHAIRMAN  
UNITED STATES NUCLEAR REGULATORY COMMISSION  
TO THE  
HOUSE COMMITTEE ON ENERGY AND COMMERCE  
SUBCOMMITTEES ON ENERGY AND POWER, ENVIRONMENT AND THE ECONOMY  
MARCH 16, 2011

Mr. Chairmen, Ranking Members Rush and Green, and Members of the Subcommittees, I am honored to appear before you today on behalf of the U.S. Nuclear Regulatory Commission. Given the events that are unfolding overseas, my opening remarks will focus on the crisis in Japan, ~~not and I have additional information on the Fiscal Year 2012 budget as was originally planned that I have submitted for the record.~~

I would first like to offer my condolences to all those affected by the earthquake and tsunami in Japan over the last few days. My heart goes out to those who have been dealing with the aftermath of these natural disasters.

Since Friday, the NRC's headquarters Operations Center has been operating on a 24-hour basis to ~~follow events~~ unfolding at nuclear power plants in Japan. Since the earthquake hit northeastern Japan last Friday, some reactors at the Fukushima No. 1 plant have lost their cooling functions, leading to brief rises in radiation levels. Two NRC experts on boiling-water reactors have already been deployed to Japan as part of a U.S. International Agency for International Development team, and they are currently in Tokyo. Since then, the Japanese government has formally asked for assistance from the United States as it continues to respond to cooling issues at the country's nuclear power plants. Another NRC team is being ~~assembled scheduled to land this morning in response to this request.~~

**Comment [AXP1]:** Would prefer a stronger word than "follow" -- monitor and analyze.

**Comment [AXP2]:** Yes, they will arrive the morning of the hearing

Within the U.S., the NRC has been coordinating its efforts with other Federal agencies as part of the government response to the situation. This includes monitoring radioactive releases and predicting their path. All the available information indicates that weather conditions have taken the small releases from the Fukushima reactors out to sea away from the population. Given the thousands of miles between Japan and the United States, Hawaii, Alaska, the U.S. Territories and the West Coast are not expected to experience any harmful levels of radioactivity.

Examining all available information is part of the effort to analyze the event and understand its implications both for Japan and the United States. The NRC has been working with several agencies to assess recent seismic research for the central and eastern part of the country. That work continues to indicate that U.S. plants will remain safe.

U.S. nuclear power plants are built to withstand environmental hazards, including earthquakes and tsunamis. Even those plants located outside of areas with extensive seismic activity are designed for safety in the event of such a natural disaster. The NRC requires that

safety-significant structures, systems, and components be designed to take into account the most severe natural phenomena historically reported for the site and surrounding area. The NRC then adds a margin for error to account for the historical data's limited accuracy. This means that U.S. nuclear power plants are designed to be safe based on historical data from the area's maximum credible earthquake.

The NRC is always attentive to any information that can be applied to U.S. reactors. Our focus is always on keeping plants in this country safe and secure. As this immediate crisis in Japan comes to an end, we will look at whatever information we can gain from the event and see if there are changes we need to make to our own system. However, the bottom line is that we believe our plants are safe.

The NRC will continue to monitor the situation and provide updates via press release and public blog. Our counterpart in Japan is working to control events abroad, and we continue to have faith in its ability to do so. In the meantime, the NRC stands ready to offer further technical assistance as needed. We hope that this situation will be resolved soon so that Japan can begin to recover from this terrible tragedy.

Yesterday's briefing.

THE WHITE HOUSE  
Office of the Press Secretary

---

For Immediate Release

March 14, 2011

PRESS BRIEFING  
BY PRESS SECRETARY JAY CARNEY,  
NUCLEAR REGULATORY COMMISSION CHAIRMAN GREG JACZKO  
AND DEPUTY SECRETARY OF ENERGY DAN PONEMAN

James S. Brady Press Briefing Room

Please see below for a correction (marked with asterisks) to the transcript.

DEPUTY SECRETARY PONEMAN: Thank you, Mr. Chairman. Thank you, Jay.

We have been working very closely with our colleagues throughout the interagency process here at the Department of Energy. We've been \*\*led by Secretary Chu -- I just came from speaking with him on this matter and we've been speaking continuously throughout the weekend.

1:07 P.M. EDT

MR. CARNEY: Good afternoon, everyone. Over the weekend, as you know, the President was briefed multiple times on the situation in Japan in the wake of the tragic earthquake and tsunami there. USAID is leading our humanitarian assistance effort with the Department of Energy, the Department of Health and Human Services, the Nuclear Regulatory Commission and others.

Here at the White House, Homeland Security Advisor John Brennan is coordinating an interagency process with regards to Japan and engaging with relevant officials from across the government. Because we knew that you would have a lot of questions about the situation in Japan, especially with regard to nuclear issues, I brought with me today, asked to come today, Greg Jaczko, who is the chairman of the Nuclear Regulatory Commission. He can answer questions people have about the safety of American citizens in Japan, as well as he can just generally update Americans about the impact of the accident -- or rather the aftermath of the tsunami and earthquake.

And then I also have Dan Poneman, who is our Deputy Secretary

I-85

of Energy, and he can outline everything that we are doing to assist Japan as it deals with the aftermath.

With that, I'll ask these two gentlemen to speak. If you could address the questions related to their areas to them, and then we'll let them get out of here and get back to work. And I will take questions on other issues. Thanks very much.

CHAIRMAN JACZKO: If I could just start with just a few points. First and foremost, based on the type of reactor design and the nature of the accident we see a very low likelihood, really a very low probability that there's any possibility of harmful radiation levels in the United States or in Hawaii, or in any other U.S. territories.

Right now, based on the information we have, we believe that the steps that the Japanese are taking to respond to this crisis are consistent with the approach that we would use here in the United States. And most importantly, we advise Americans in Japan to listen to and to follow the instructions of the Japanese government with regard to the nuclear facilities.

The agency has been providing technical assistance to the Japanese government as they are requesting, and in particular, we have dispatched two technical experts to Japan and are continuing to assemble a team of experts that would be dispatched in the near future.

So with that, I will then turn to Dan.

DEPUTY SECRETARY PONEMAN: Thank you, Mr. Chairman. Thank you, Jay.

We have been working very closely with our colleagues throughout the interagency process here at the Department of Energy. We've been \*\*\*led by Secretary Chu -- I just came from speaking with him on this matter and we've been speaking continuously throughout the weekend. John Brennan has been coordinating matters interagency. We have had frequent meetings in person, we've had frequent meetings over the telephone, as we are trying to respond to all of the data that we are taking in.

We've also been in very, very close, continuous consultation, all hours of the day, with Ambassador John Roos -- and hats off to him for the incredible job he and the country team have been doing as they've been coordinating the American response. And as appropriate, given their independent regulatory status, we're making sure we share information as appropriate with Chairman Jaczko and our colleagues over at the NRC.

We have focused our efforts on consulting very, very closely with our Japanese colleagues. We also have dispatched subject matter experts -- both reactor experts and an expert on emergency response. We are in consultation with them and we will make sure that any requirement that they have we are prepared to meet. And we are talking with them even on a real-time basis as that proceeds. So we have technical expertise already there on the ground. We have additional capabilities if and as needed. Of course, the Japanese government has tremendous capabilities on their own, but because a matter of this nature requires all of our best efforts, we stand ready to assist as required.

MR. CARNEY: What I'll do is I'll go ahead and call on people. Ben, why don't you start?

Q Thank you. Chairman Jaczko, can you give us a sense of how President Obama is getting briefed about this nuclear crisis in

Japan and the risk to the people there? And also, in the plainest terms you can, can you describe sort of the nature of what we're seeing and just how bad it is?

CHAIRMAN JACZKO: Well, I would turn to one of the others about the President's briefings.

MR. CARNEY: Let me just say, Ben, if I could, the President was briefed multiple times over the weekend. He has been briefed this morning and is being updated throughout the day. John Brennan, the Assistant to the President for Homeland Security, is taking a lead on that and gathering information and coordinating the briefings the President gets with all the relevant officials in the government.

CHAIRMAN JACZKO: It terms of the second part of your question, it is a serious situation certainly in Japan. The efforts right now of the Japanese government, with our assistance where they've requested it, is to continue to look for ways to provide the ability to keep the reactors cool. And that is a process that has been ongoing now for some time, and we continue to provide assistance where we can. In particular, they have asked for additional types of equipment that will help provide water and other resources to ensure that the reactors continue to be cool.

Q Has there been a partial meltdown in any of these reactors there?

CHAIRMAN JACZKO: At this time, we don't really have detailed information about the nature of the core in the reactor itself. But it is a situation in which there has been a loss of the normal type of cooling mechanisms to the reactor. So as the situation continues to develop we'll get better information. But right now, the focus has been to do everything possible to ensure that the reactor continues to be cooled.

Q And this incident leading to any safety concerns at nuclear facilities here in the United States?

CHAIRMAN JACZKO: Well, as I said, from the NRC's perspective, we are always focused on the safety and security of nuclear power plants in this country. That will always be something that we do. Whenever there's any new information, we always take that information into consideration and make changes if necessary. But right now we continue to believe that nuclear power plants in this country operate safely and securely.

I'll stop at that point.

MR. CARNEY: Jill.

Q Following up on that, is there any attempt, though, at this stage to assess, carry out a study of the ability of these plants in the United States to withstand an earthquake? Because after all, you have California. And also at least one of the reactors in jeopardy apparently in Japan uses that MOX fuel. Is there more concern about that, heightened -- any situation with the venting?

CHAIRMAN JACZKO: Well, with regard to the U.S. power plants, the U.S. power plants are designed to very high standards for earthquake effects. All our plants are designed to withstand significant natural phenomena like earthquakes, tornadoes and tsunamis. So we believe we have a very solid and strong regulatory infrastructure in place right now. But of course, as we always do, as an independent regulatory agency, we will continue to take new information and see if there are changes that we need to make with our program.

With regard to the MOX fuel, again, we are providing assistance to the Japanese where they request our assistance. And at this time, they have not asked for any specific information with regard to the MOX fuel.

Q You just talked about how the high standards are here in the United States domestically. What are the differences in safety standards between what Japan has and what the United States does have?

CHAIRMAN JACZKO: Well, right now as I said, our focus is always on keeping the nuclear power plants in this country secure. We are also putting a strong focus right now on providing technical expertise to the Japanese as they request it. Questions about exactly the differences and what changes we might want to consider and look at in this country is something we'll deal with down the road. But bottom line right now, we believe that the plants in this country continue to be designed to a very high standard for seismic and tsunami-type events.

Q There's already been calls -- this might be more for Jay, but there are already calls for moratoriums in the United States. For example, Congressman Markey called for that. Does the President know about these calls for changes in U.S. handling of this issue? And you said you were reviewing, but what is the timeline for that? This is obviously something that Americans are concerned about.

CHAIRMAN JACZKO: Again, as an independent regulatory agency, we will always take whatever steps are necessary to ensure the safety and security of nuclear power plants in this country. But right now we believe we have a very strong program in place. As we get more information from Japan, as this immediate crisis ultimately comes to an end, we will look at whatever information we can gain from this event and see if there are changes we need to make to our system.

I would just add as a similar scenario, following the 2004 tsunami, we did review tsunami requirements for nuclear power plants, and, in fact, went and made sure that our plants would be able to deal with that type of event.

MR. CARNEY: Chip.

Q Would plants in the United States be able to withstand a quake of this magnitude?

CHAIRMAN JACZKO: Again, I don't want to speculate on anything like that at this point.

Q But are they planned to be able to -- I know they try to estimate what they would be able to withstand. I know in Japan, for example, this one I believe was only built to withstand a 7.9 or something like that. In the United States, are they built to withstand a quake of this magnitude, of an 8.9?

CHAIRMAN JACZKO: At this point what I can say is we have a strong safety program in place to deal with seismic events that are likely to happen at any nuclear facility in this country. As we get past this immediate crisis where we continue to provide support to the Japanese, we'll gather information about the specifics of the event. But I don't want to speculate too much about what exactly were the relevant factors in Japan at this point.

Q And one other question. You said that there's a "very low likelihood," I believe were your words, of harmful radiation making it to Hawaii or the West Coast. Is that based on the condition of those plants right now, or is that based on a partial meltdown or,

heaven forbid, a total meltdown? Could that change your assessment?

CHAIRMAN JACZKO: The information about harmful -- the lack of any harmful impacts to the U.S. is simply based on the nature of these reactors and the large distances, obviously, between those and any U.S. territory. So you just aren't going to have any radiological material that by the time it traveled those large distances could present any risk to the American public.

Q Even in a worst-case scenario, even with a meltdown, you're not going to have harmful radiation reach Hawaii or the West Coast?

CHAIRMAN JACZKO: Again, I don't want to speculate on various scenarios, but based on the design and the distances involved, it is very unlikely that there would be any harmful impacts.

MR. CARNEY: Mike.

Q Do you gentlemen worry about perhaps an overreaction in this country, seeing a nuclear problem in another country, in terms of policymakers running away from nuclear energy?

CHAIRMAN JACZKO: I would defer to Dan.

DEPUTY SECRETARY PONEMAN: I think you just heard very clearly from Chairman Jaczko that we place safety paramount when it comes to the regulation of our nuclear power plants, and we always will. That having been said, we have to have an energy policy and a direction in this country that's driven by our overall assessment of our country's best interest.

In that respect, we are going to continue to seek to diversify our energy supplies. We're going to continue to make sure that each and every one of those sources is as safe as is humanly possible. And we will continue to take all learnings into account as we proceed from episodes that happened, from hypothetical that we might be able to come up with. It's a matter -- it's nothing new about it. It's a matter of our continuous approach to our own development of our safety resources -- our energy resources to make sure that they're done continuously and safely. Each event as it occurs is taken into account, but we don't sort of change from day to day our overall approach to the desire to diversify our overall energy posture.

Q And nuclear is a key component in your interest in diversification, correct?

DEPUTY SECRETARY PONEMAN: Nuclear power has been a critical component to the U.S. energy portfolio. We have 104 operating reactors -- that's 20 percent of the electricity of this country; 70 percent of the carbon-free electricity in this country comes from nuclear power. So we do see nuclear power as continuing to play an important role in building a low-carbon future. But be assured that we will take the safety aspect of that as our paramount concern.

And under the independent regulatory authority, going back to 1974, the NRC, which is independent and is, therefore, at arms' length, will ensure that we live up to exactly those kinds of high standards that the President expects us to use in operating those plants.

Q And quickly, it is critical to reaching your mission goals, correct -- nuclear energy?

DEPUTY SECRETARY PONEMAN: We view nuclear energy as a very important component to the overall portfolio we're trying to build

for a clean energy future.

Q I want to follow up on a question and see if we can get Jay to answer on this -- the moratoria issue. I think it was Senator Lieberman said over the weekend that what's gone on in Japan should cause us to put the brakes for the moment on nuclear power plant development in America. Does the administration agree with that?

DEPUTY SECRETARY PONEMAN: I'm happy to start and others can supplement.

As I said, going back decades, every experience that we have with respect to our nuclear plants we take fully into account. Certainly back in March 1979 at the time of the Three Mile Island episode, there were a tremendous amount of learnings that we applied to the improvement of safety in our fleet. Our reactors are much safer today because of all those learnings that have been applied.

We continually hypothesize new scenarios of different types and never stop our efforts to continue to exercise our capabilities, to assess the possibilities, and to ensure that our reactors can operate as safely as possible. We'll continue to do that. We'll continue to seek to improve. We'll certainly take the learnings out of this experience and apply those as well. And we know, because of the independence of the Nuclear Regulatory Commission, that in terms of operating our reactors only if they can operated safely, that is a responsibility that is properly reposed in the Nuclear Regulatory Commission.

Q So a pause isn't necessary?

DEPUTY SECRETARY PONEMAN: From a policy perspective, we will continue to operate our reactors and seek to operate them safely. We will continue to seek to build nuclear into a part of a responsible energy future, and we will repose our confidence in the NRC to make sure that we only do so to the extent that it can be done safely.

MR. CARNEY: Athena, I would just add that we have the plants that we have already in operation that provide 20 percent of the electricity in the United States. And information is still coming in from Japan, so as we evaluate that information, these gentlemen have made clear that they will incorporate that into how we view safety and security of nuclear energy as a resource.

But it remains a part of the President's overall energy plan when he talks about reaching a clean energy standard it's a vital part of that. And as we get more information about Japan and what happened there, that can be incorporated. But right now, we remain committed to the clean energy standard and the other aspects of the President's energy plan.

Q Mr. Chairman, do you have NRC people in Japan now?

CHAIRMAN JACZKO: We currently have two NRC technical experts in Japan. They are working to provide information to the U.S. embassy, as well as to interface with their colleagues in the Japan regulatory authority.

Q And from your understanding of the situation now with the Japanese reactors, is it as bad as it's going to get, or might it get worse?

CHAIRMAN JACZKO: Again, I don't want to speculate on how this may progress. I would say it is a serious situation, and we continue to provide whatever assistance is requested from us and is necessary -- assistance requested or necessary by the Japanese

government. And I would it is a -- Japan is a technically advanced nuclear country and they possess significant technical resources and capability on their own.

Q Jay, so there's nothing -- the President hasn't seen anything in Japan that will lead him to change his position that the U.S. should continue to get power from nuclear sources and increase that amount in the future?

MR. CARNEY: Dan, from a policy point of view -- but again, this is a -- information is still coming in. I think these gentlemen have addressed the issues of safety and security of the American nuclear energy program. And as more information comes in, obviously it will be evaluated. But 20 percent of our electricity is generated by nuclear power. It is already a major component of our energy here in the United States.

CHAIRMAN JACZKO: If I could add, just again to reiterate I think the point that's been made, that we are an independent regulatory authority and we always keep focus on a day-to-day basis on the safety and security of nuclear reactors in this country. So if we do get information that would cause us to take action, we will take that action. But at this time, we don't have any information that would cause us to do anything different with our approach with the current reactors. But we will review information as it becomes available.

MR. CARNEY: A couple of more.

Q Mr. Chairman, of those two technical advisors you have there, are they in Tokyo? Are they up near the facility? Are they getting information from the Japanese government? And how would you describe the Japanese government's description of what's going on? Are they being forthcoming with both the public and with you?

CHAIRMAN JACZKO: Well, our two experts are in Tokyo and they are providing assistance to both the U.S. embassy as well as an interface with our Japanese counterparts. And we continue to work to provide resources and assistance as we can.

Q Are they getting information, technical information from the Japanese? Are they watching press reports about what they're seeing going on? To what extent are they really hearing what's going on?

CHAIRMAN JACZKO: Right now, they're providing a very valuable resource to us to give us direct information from Japan about what's going on. And that's coming from a variety of sources, including interaction with counterparts in their regulatory --

Q Has the government of Japan been very cautious about what it's putting out publicly? They didn't have much urgency at the beginning and it's gotten more and more urgent.

CHAIRMAN JACZKO: Again, from what I've seen, we continue to see a very aggressive effort to deal with what is a very difficult situation in Japan right now.

DEPUTY SECRETARY PONEMAN: Can I just supplement that by saying that we've been in consultation through Ambassador Roos. He's been in continuous consultation with Chief Cabinet Secretary Edano. And we have two subject matter experts over there as well, and they are in communication with their counterparts.

Q Have you supplied any actual equipment to the Japanese? Have they requested anything?

DEPUTY SECRETARY PONEMAN: Well, we are ready to provide equipment. We have talked to them about what they have. As of this morning, there may be some additional information that Chairman Jaczko may wish to comment on. But what we are making sure of is, A, of course they have a lot of equipment on their own, but, B, such equipment as we have -- and we have equipment that can do aerial monitoring of ground deposition -- that's available. We have emergency response equipment. That's available. We're not starting from a blank slate, though, because the Japanese already have a lot of equipment, and we're just making sure we've got what we need to supplement.

MR. CARNEY: Why don't we -- one question from the Japanese media and then we'll wrap this part up.

Q With the accident at the nuclear plant over the weekend, has there been any direct impact from that on the U.S. support teams that are already in the area? Have they had to alter their plans at all as a result?

CHAIRMAN JACZKO: I would defer that question to AID, I believe. They have better information about the teams. The two NRC officials who are in Tokyo have not experienced any issues that I'm aware of. But, obviously, their safety -- their personal safety is important to us. But in Tokyo, there is no direct impact from the nuclear incident itself.

Q Can you talk then more generally about the logistical challenges of going into an area with such unprecedented damage?

CHAIRMAN JACZKO: Again, I would defer some of those broader questions to the folks at AID that we've been working with very closely to help provide that logistical support.

DEPUTY SECRETARY PONEMAN: I would just add to that, our DOE people have not been impaired in their ability to reach out to their Japanese counterparts. And in fact, at the Ambassador's request, we're sending another technical expert to join the team so they've got more subject matter expertise there.

In the context of the coordination that Mr. Brennan has been doing from the homeland perspective, we are making sure and working very closely with our colleagues in the Pentagon to make sure that any assets from a U.S. government perspective that need to be brought in there, we make available whatever assets we have through them, working with AID, as well.

Q Can I ask about nuclear waste, please? It's very important.

MR. CARNEY: I want to let these guys go for now.

Q Can we ask you about it?

MR. CARNEY: We'll take one question on nuclear waste, Connie.

Q Thank you. Is the U.S. reviewing its policy now on nuclear waste? And what are the Japanese doing in the midst of this crisis with their nuclear waste?

DEPUTY SECRETARY PONEMAN: I would segregate what they're doing in the middle of this crisis with respect to their nuclear waste. The first focus in the crisis, obviously, is getting the coolant to the cores of the affected reactors. And of course, there is spent fuel present at the reactors and making sure that that used fuel remains cooled properly and so forth.

From a U.S. perspective, we are still very closely evaluating our options. And the principal mechanism here, as you well know, is that President Obama asked Secretary Chu to convene a high-level panel of very distinguished Americans, chaired by Mr. Lee Hamilton, former congressman, and retired general Brent Scowcroft. And that group is going to be looking at all the options having to do with the back end of the fuel cycle for the United States of America, and by July will be coming back with some interim views on the options we ought to think about going forward. I'm sure they're going to be taking all of these experiences, data coming out of this experience into account.

Q Are you confident that Japanese nuclear waste is safe now?

DEPUTY SECRETARY PONEMAN: In terms of Japanese regulation of Japanese nuclear waste, I would refer you to the Japanese regulatory authorities.

MR. CARNEY: Thank you, gentlemen, very much. I appreciate it. We'll move on to the rest of the briefing. Thank you for coming.

Thanks for holding in abeyance your questions on other issues. Ben.

Q Two quick ones, Jay. I know that the President's concern first and foremost is about health and safety as it relates to this disaster. But is he also concerned about the impact the Japan natural disaster could have on the world economy?

MR. CARNEY: Ben, we have full confidence in the capacity of Japan to address the economic challenges during these exceptionally difficult times. We're monitoring, as we do always, the global economic environment, but we stand ready to assist the Japanese who are our friends and allies in any way that we can. And it's important to remember that the Japanese have demonstrated a great resiliency and ability to pull together during times of adversity, and we are confident that they will overcome this challenge and recover from this tragedy.

Q And on one other topic, on the meeting that the President is having with General Petraeus, could you just tell us a bit about why he's here? And specifically, is this a meeting at which he -- the General plans to talk about troop withdrawal plans in Afghanistan?

MR. CARNEY: Well, the General, as you know, is here. He is testifying on the Hill this week, and he is here meeting with the President today -- well, they meet with some regularity -- but to brief him on the progress we're making in Afghanistan. And as part of that discussion, yes, I believe they will discuss the President's plan to being a transition process in July of 2011, which will begin a process that will lead to turning over the security lead to the Afghan security forces by the end of 2014.

Q Jay, I saw the statement this morning about Bahrain and Saudi Arabia and the other GCC countries, but if this is the case that you have Saudi Arabia sending its forces into Bahrain, isn't that a gross violation of the sovereignty of another country?

MR. CARNEY: Well, we're aware of those reports and that other GCC countries are considering doing that. We urge all of our GCC partners to show restraint and to respect the rights of the people of Bahrain, and to act in a way that supports dialogue instead of undermining it. The important factor here is that our overall principles apply to Bahrain and all the countries in the region, which is that we urge restraint. We urge nonviolence in response to

nonviolent protesters; the respect for the universal rights of people in the region to gather peacefully, to voice their opinions, to have their grievances heard by their governments, and to have greater participation in the political process.

We have long believed and the President has expressed for a long time now that stability in the region will be brought about by dialogue and political reform. And it is counterproductive to that goal to in any way repress the expression of those desires that the people of Bahrain, in this case, and other countries, have.

Q Jay, that's a very diplomatic way of saying that the U.S. is unhappy about what's going on. But if another country, if Iran had decided to go into another country because they felt it was the right thing to do, what would the United States be saying? And I know it's a hypothetical, but this appears to be pretty serious.

MR. CARNEY: Well, again, I think you have to understand what -- I mean, we've seen the reports that you're talking about. This is not an invasion of a country.

Q Right, but there are security forces.

MR. CARNEY: It is -- correct. And we urge the government of Bahrain, as we have repeatedly, as well as other GCC countries to exercise restraint, and not to meet the nonviolent protests of people legitimately expressing their concerns and asking to have their voices heard with any kind of physical violence. So we -- that -- we call on, again, the government of Bahrain as well as other countries in the region that -- to hear this message.

Steve.

Q Did you get any advance warning that this was going to happen, the Saudis moving in?

MR. CARNEY: I don't have anything on that for you, Steve. As far as --

Q As far as you know -- okay.

MR. CARNEY: I don't know. I don't have anything for you on that.

Q Are we calling on the Saudis to leave?

MR. CARNEY: We are calling on the Saudis, the other members of the GCC countries, as well as the Bahraini government, to show restraint; and that we believe that political dialogue is the way to address the unrest that has occurred in the region, in Bahrain and in other countries, and not to in any way suppress it.

Yes.

Q Over the weekend you sent out a statement responding to the Arab League's endorsement of a no-fly zone, but you didn't obviously indicate whether the United States supports that or not. Knowing that all options are still on the table, isn't it approaching a situation where it might be too little, too late, in Libya to enact this no-fly zone?

MR. CARNEY: As you know, we have discussions going on at the United Nations in New York regarding various options, military options, as well as non-military, and specifically a no-fly zone option. We have, as you know, tomorrow and then Wednesday at NATO, a process by which the plans that were being reviewed and refined that address a no-fly option will be presented to the NAC on

Wednesday. And so we are, as we have said, constantly reviewing our options, refining our options, and this process is moving along.

The situation in Libya -- we continue to condemn the use of violence against the Libyan people by the Qaddafi regime, and we are encouraged by the international condemnation of that and by the actions taken by the Arab League, for example, because we believe that whatever actions we do take should be international and especially should represent the will of the people in the region and the countries in the region. And that's why the Arab League's voice on this is so important.

Q Knowing that you are -- could potentially be -- could be moving forward on this this week, but doesn't that -- there's been some voiced concern from foreign counterparts that that might nullify the goal of a no-fly zone, to enact it a little too late. Is there no concern --

MR. CARNEY: Well, Sunlen, again, I would say that the -- to go back to things we've talked about last week, the speed of the international reaction here has been quite remarkable and we are not letting up on our pressure, as the President made clear on Friday. I would note that, as you probably know, Secretary Clinton is in Paris where she will meet with opposition leaders, Libyan opposition leaders, as well as G8 counterparts to discuss some of these issues.

So we are moving with a great deal of haste and in coordination with our international partners, again with the kind of deliberation and speed that the situation requires, mindful of the fact that the decisions we're talking about here are significant ones and need to be made with everyone's eyes open to what they mean and what the goals are -- and I mean that with regard to a variety of possible options.

Chip.

Q Jay, following up on the no-fly zone, my understanding is there are now about five ships off the coast of Libya, three U.S. submarines off the coast, presumably with cruise missiles, plus you've got plenty of NATO aircraft at bases in the vicinity. Is the hardware now in place where if the President and other leaders were to give the order, that they could pull the trigger on a no-fly zone right now?

MR. CARNEY: Chip, what I would say, first of all, for the technical requirements to impose a no-fly zone, I would refer you to NATO, to the Defense Department. But what I think Secretary Gates has made clear and others have made clear is that this has never been a case about what our capabilities are. Obviously the United States of America has the capacity with its international partners to engage -- activate a no-fly zone, as well as take a variety of other potential measures.

The issue is making sure that the policy decisions we make, we make collectively with our international partners, because it is very important that the response be an international one and not just an American one, and that we are cognizant of what the goals are and whether they're achievable, and what the impacts of that decision will be.

Q But there's no big lag period? If they decide Tuesday, Wednesday to --

MR. CARNEY: Again, I don't have specifics on what technical requirements have to be met in order to begin to implement an option like that. I would refer you to NATO probably for that.

Q Just one more question. Following up on Ben's when he asked you about the global economic impact here, you basically responded with your confidence in the resiliency of Japan. But even if Japan does respond as well as could possibly be expected, this could still have a significant effect on the global economy. In discussions back there that you've been a part of or are aware of, have you heard economic advisors for the administration suggest that what could happen here is the same thing that happened last year with the Greek crisis, delaying the economic recovery? Could this have that same kind of effect on the economic recovery again?

MR. CARNEY: Well, I would just say, Chip, that these are still early days, but that we remain confident that Japan and, therefore, the world can deal with this crisis and respond and rebuild in a way that is good for Japan and good for the world. So we have that confidence and we therefore believe that -- the resiliency of the Japanese people, the resiliency of the Japanese economy are very important factors in the capacity of Japan to handle this, and therefore the world working with Japan to handle it as well.

Q The recovery is safe?

MR. CARNEY: Again, I would just refer you to what I said.

Q A quick one on the gun laws. President Obama wrote an op-ed over the weekend and he said, "None of us should be willing to remain passive in the face of violence or resigned to watching helplessly as another rampage unfolds on television." So the question is what is the administration prepared to do actively, to actively support legislation-wise? For instance, Representative McCarthy's bill to ban high-round magazines -- is that something that the President or administration officials will come out in support for?

MR. CARNEY: Well, what I've said in the past still holds, which we will review proposed legislation as it comes up. I don't have any announcements for what we would support. But I would also say that the Department of Justice has reached out to stakeholders on all sides of this issue and they're going to be holding a series of discussions as a first step, and that some of those meetings are happening this week.

So we are -- the President made his views known in the op-ed that you referred to. And the Department of Justice is continuing this process by meeting with stakeholders on all sides of the issue to look at ways that we can find common ground to take some common-sense measures that respect Americans' Second Amendment rights, but also deal in a common-sense way with Americans' safety and security.

Q So the administration wouldn't put forth legislation on its own or spearhead a plan?

MR. CARNEY: Well, I don't want to speculate about what we may or may not do legislatively, except to say that we are engaged in this process.

Yes, Carol.

Q Sort of on what Chip was talking about, is there -- how much aid is the United States willing to give to Japan? And have there been discussions in the administration about financial assistance and what that amount might look like? Have the Japanese made any specific requests?

MR. CARNEY: I think we are now in the phase of dealing with the immediate crisis, and we are offering any and all assistance that we can provide that the Japanese request and need to help them deal

with it. They are a very close ally and we stand ready to assist them in any way that we can. Long term, obviously, we'll have to evaluate what the needs are and how we can help. But we're committed to helping Japan recover from this.

Q Have there been any discussions about that internally, in terms of what --

MR. CARNEY: Not that I'm aware of, because we are literally dealing with the aftermath, the considerable aftermath of a terrible situation caused by this earthquake and tsunami.

Q Just one quick thing on education -- and obviously that's an area where the White House sees room for compromise and bipartisanship -- would you consider Race to the Top an area where you have consensus? Or is that an area where the White House thinks that they might need to do some work in order to get consensus?

MR. CARNEY: Well, we are consulting with our partners on Capitol Hill of both parties on education reform regularly. And Race to the Top already has received a great deal of bipartisan support. We think it's been a very effective program and a good model for education reform. And we expect that bipartisan support to continue -- which doesn't mean we take it for granted. And in the process of improving the law, we'll be working with Republicans and Democrats going forward, but we do expect it to happen this year.

Yes, sir.

Q Jay, on a funding bill, does it look to the White House as though you will get a three-week extension before the end of the week?

MR. CARNEY: I don't want to put timing on it, Mark. But we -- the cuts that have been outlined in that temporary measure are ones that we have already identified as acceptable. So we believe that we should be able to get something done. But again, we are focused on the process of achieving a resolution for the full fiscal year. Those conversations and negotiations are ongoing and that is our primary focus.

As the President said on Friday, because of the time it took to allow the process in the Senate to take place where the Senate voted on the Republican measure that emerged from the House and the Senate Democratic measure, it became necessary to give us the breathing space to negotiate the final CR for the fiscal year. But that remains our focus. And we remain absolutely committed to the idea that we need to get this done, last year's business done as soon as possible so we can focus on some of these other big challenges that we face.

Q And Vice President Biden will be taking the lead on that now that he's back from Europe?

MR. CARNEY: Well, this is a team effort. Vice President Biden is back from his trip and I'm sure he will be very much engaged in that process going forward.

Peter.

Q Thank you, Jay. If the U.S. wants -- believes that the legitimate grievances of Bahraini people need to be met, why not call upon Saudi forces to withdraw?

MR. CARNEY: Peter, I don't have anything more for you on that. We are calling on the countries in the region to show restraint and pointing to the fact that the dialogue that can bring about political

reform is essential for the stability of the countries in the region and their continued economic prosperity. Because we believe, as the President has said going back to his speech in Cairo, that it is -- the unrest that we have seen is a result of the lack of dialogue and the lack of engagement with the peoples in the region in their governments and in the political process.

Q And also, you mentioned in Egypt that the -- Mubarak was on this wrong side of history. Is that Bahraini monarchy also on the wrong side of history?

MR. CARNEY: Well, we have called on the Bahraini government to -- as we have others in the region -- to have a dialogue with their people, to listen to their grievances, to adopt political reforms, to respect the universal rights of their people. And I think, broadly speaking, in the countries of the region, the leaders in the region will be judged by how they deal with this process. And we think it's important for the future of the region, for the peoples in these countries, that their voices be heard and their legitimate aspirations be addressed.

April.

Q Going back to the op-ed of President Obama on gun control -- the President talked about the mental competency of the gunman in Arizona, how he could not get into the U.S. military, how he could not get into a college, but yet he still purchased a gun. Is that President looking at any -- what kind of ways does the President want there to be issues of judging mental competency in purchasing a gun? Or is that something that he's looking for in anything -- any gun control measures that come along?

MR. CARNEY: That level of specificity, I don't have, April. But I think that his point that he's making is that we can honor our Second Amendment rights while still ensuring that, as you noted, that someone with a criminal record shouldn't be able to check out a gun seller; that an unbalanced man shouldn't be able to buy a gun so easily. I mean, there is room for us to have reasonable laws that uphold liberty, ensure citizen safety, respect the Second Amendment, and that we should be able to find some common ground on some of those measures. I don't want to detail what those measures are or what he has in mind, specifically. The conversations are beginning along those lines at the Department of Justice.

Q Do conversations include gun shows, purchases at gun shows?

MR. CARNEY: Again, I don't have -- I don't want to narrowly define specific measures that may or may not be proposed. We're looking at possible legislation and we're having conversations with stakeholders on all sides of the issue.

Chris.

Q Thanks, Jay. I have some questions for you on marriage. Last week, the Maryland statehouse recommitted a bill legalizing same-sex marriage to committee because proponents didn't feel like they had enough votes for passage. The measure is effectively dead for this year even though Democrats have control of the chamber. By not supporting same-sex marriage, is the President, as head of the Democratic Party, giving cover to Democrats in that chamber who don't support the bill?

MR. CARNEY: Chris, the President's position on gay marriage is well known. He addressed this in December at the press conference and I don't have anything new for you on that.

Q So is the President not concerned that this measure failed

to progress in that chamber?

MR. CARNEY: I don't have anything for you on that either.

Q One last question, one last question. The proponents of this bill said they're going to try again in 2012. You said he's grappling with the issue of same-sex marriage. The President said he's wrestling with it. Is he going to pin down support for marriage equality and make an announcement before next year in time for these efforts --

MR. CARNEY: I don't have any timing for you on that either.

Yes.

Q Moroccan King has delivered a speech in which the government will change the reform (inaudible) constitution to give more power for the prime minister and lose more freedom. So does the White House have any comments on Morocco speech?

MR. CARNEY: I'm not sure if we have anything specifically on that. We encourage political reforms that liberalize the governments there, that allow for greater participation and representative government, and that applies across the region.

Q Jay, I have two questions, one a follow-up. Is it safe to assume that the GCC countries have not coordinated or informed the United States about their move to enter Bahrain, considering that they're close allies of the United States? And second, the Turkish Prime Minister said that it's counterproductive to have military intervention in Libya by NATO or any other country. Does this complicate your effort or all-options-on-the-table kind of approach?

MR. CARNEY: Regarding the no-fly zone and other options, nothing has changed since I last addressed this question five minutes or so ago. So the -- and with regards to Bahrain, we've made clear that we call on the nations in the region to show restraint and to honor the peaceful protestors by not using force against them. We make that -- call on the Bahraini government and the GCC countries as well.

Q So they haven't informed you? You don't know anything --

MR. CARNEY: I don't have anything on that.

Yes.

Q Jay, last week, Robert Einhorn over at State had a comment on Iran's nuclear program. He said that the U.S. believes that Iran intends to get to the brink of a nuclear capability but won't go to breakout. Can you talk about the extent to which that's been the subject of the conversation here at the White House by the President?

MR. CARNEY: I don't have anything -- any new information on that since the last time we addressed -- Ron, if you can talk to State about those particular comments.

Q Is that going to change his calculus at all?

MR. CARNEY: Well, we've made very clear that we are very concerned about Iran's pursuit. We and a lot of our international partners maintain that concern, so I think that still holds.

Yes.

Q Secretary Clinton last week told Congress that she wasn't

sure that a no-fly zone would actually be effective. She cited Iraq and Kosovo. Was she stating administration policy?

MR. CARNEY: Well, as I've made clear from this podium and others have made clear, too, that it is very important -- no matter what options we choose -- that we are aware of what is entailed in applying them, enforcing them, and that we are confident that the goals we set out for them are achievable.

The fact that, as Secretary Gates and others have said, that a no-fly zone is a serious matter and with costs associated and risks associated doesn't mean that it's off the table. It's still very much on the table. I think the purpose of having Secretary Clinton or Secretary Gates or others make people aware of the seriousness of a measure like that is simply that; so that we all are aware going into this process should that decision be made -- or other decisions be made -- that we know what we're talking about and what we would be pursuing.

Q But she said it doesn't work. So why would it be on the table?

MR. CARNEY: No -- well, I don't want to parse her words. I think -- but what I have made clear and others have made clear is that we need to know -- we would in any process, any decision like this we would make, we would have a plan, which I think elements are being developed at NATO about what a no-fly zone plan would look like and its implementation would look like should that be chosen. And it would obviously include within it discussion about its presumed effectiveness, the impact it would have, the risks associated with it and the potential costs associated with it.

Q Have you run any numbers on that as to cost?

Q She said it didn't get rid of the leader --

MR. CARNEY: I don't have any -- no, I don't.

Q She said it didn't get rid of the leader. It didn't stop the violence. So what would be the point?

MR. CARNEY: Again, making -- she's making an observation about a past exercise. Before we take any action, we would evaluate what that action would mean if it were applied in the specific case at hand.

Q Can I follow up, Jay?

MR. CARNEY: Yes.

Q Thanks, Jay. I don't want to ask about what the U.S. is ready to do or not ready to do, and I have lot of sympathy towards caution, but my question is about what would the U.S. accept others to do? Would it be conceivable that somebody else who seems to be much more eager to call for a no-fly zone, like France, like Arabic states, could you accept that they are taking the lead and say, okay, if France want to do it, together with Egypt, it's fine with us? Or would the U.S. prefer to be in control of the process because the consequences would also be consequences for the position of the U.S. in the region?

MR. CARNEY: Well, I think I have made clear that we feel it's very important that this -- the actions we take in response to the situation in Libya be international actions, that we work in concert with our international partners. So, quite the contrary; this is not about the United States dictating what happens working with our international partners. So the consultations continue with the

French and the British and others about what other measures we can take together.

So I don't -- I think we welcome the fact that there is so much international approbation and international unity in condemning what the Qaddafi regime is doing, and so much discussion with our international partners about all the different measures that we could do together to continue to put pressure on Qaddafi, to get him to cease and desist what he's doing against his people, and ultimately to remove him from power.

Q Could it also happen without involvement of the United States?

MR. CARNEY: Well, right now we're discussing at the United Nations, in Brussels at NATO, with our international partners what the various options are. We're very engaged in that discussion and continue to have that specific option on that the table.

Q Just two questions, Jay.

MR. CARNEY: Okay, I'm going to wrap it up here. Thank you very much.

Q When does he fill out his bracket? When is the Andy Katz exclusive?

MR. CARNEY: Stay tuned..

END

## 8-14 March 2011

### REGULATION & SAFETY:

#### Dramatic escalation in Japan

15 March 2011

Loud noises were heard at Fukushima Daiichi 2 at 6.10am this morning. A major component beneath the reactor is confirmed to be damaged. Evacuation to 20 kilometres is being completed, while a fire on site was put out. Tepco have said containment shows 'no change'.

#### Loss of coolant at Fukushima Daiichi 2

14 March 2011

Serious damage to the reactor core of Fukushima Daiichi 2 seems likely after all coolant was lost for a period.

#### Explosion rocks third Fukushima reactor

14 March 2011

Another hydrogen explosion has rocked the Fukushima Daiichi nuclear power plant, this time at the third reactor unit. Analysis shows the containment structure remains intact.

#### Cold shutdowns at Fukushima Daini

14 March 2011

Two more reactors at Fukushima Daini have now achieved cold shutdown with full operation of cooling systems. Engineers are working for the same at the last unit.

#### Rolling blackouts as Japanese efforts continue

14 March 2011

Japanese utilities are introducing rolling blackouts in the face of energy shortages following the natural disasters of the last few days. Meanwhile, the country is relying more than ever

I-87

on the continued operation of its other nuclear reactors.

#### Efforts to manage Fukushima Daiichi 3

13 March 2011

Operations to relieve pressure in the containment of Fukushima Daiichi 3 have taken place after the failure of a core coolant system. Seawater is being injected to make certain of core cooling. Malfunctions have hampered efforts but there are strong indications of stability.

#### Contamination check on evacuated residents

13 March 2011

Potential contamination of the public is being studied by Japanese authorities as over 170,000 residents are evacuated from within 20 kilometres of Fukushima Daiichi and Daiichi nuclear power plants. Nine people's results have shown some degree of contamination.

#### Battle to stabilise earthquake reactors

1 March 2011

Attention remains focused on the Fukushima Daiichi and Daini nuclear power plants as Japan struggles to cope in the aftermath of its worst earthquake in recorded history. A dramatic explosion did not damage containment and sea water injection continues through the night.

#### Massive earthquake hits Japan

1 March 2011

Nuclear reactors shut down during today's massive earthquake in Japan. Official sources have reported no detected radioactive release but are still monitoring the situation, meanwhile work to establish adequate cooling at Fukushima Daiichi continues.

#### US nuclear regulator OKs Vermont Yankee extension

1 March 2011

The US Nuclear Regulatory Commission has said that it will renew the operating licence for the Vermont Yankee nuclear power plant for a further 20 years, although the regulator does not have the final say in the plant's future operation.

#### Two US nuclear projects put back 18 months

8 March 2011

The US Nuclear Regulatory Commission has told Dominion and Luminant that their licence applications to build at North Anna and Comanche Peak will be delayed by some 18 months due after changes in the design of Mitsubishi Heavy Industries' Advanced Pressurized Water Reactor.

### WASTE & RECYCLING:

#### Double attack on US nuclear waste fees

10 March 2011

American utilities and regulators have both filed lawsuits against the Department of Energy for continuing to charge for the halted Yucca Mountain project.

### CORPORATE:

#### Areva, Rolls-Royce team up for UK EPRs

11 March 2011

Areva has signed an industrial cooperation agreement with the UK's Rolls-Royce for the manufacture of components for nuclear energy related projects both in the UK and overseas.

#### Endesa to access AP1000 technology

9 March 2011

Westinghouse has signed an agreement with Spanish utility Endesa to share information on its AP1000 reactor technology. The move makes Endesa a likely partner for nuclear new build projects in Spain and South America.

#### Import agreement: Baltic to Lithuania

8 March 2011

A deal has been struck that will see major power exports from the Baltic nuclear power plant to Lithuania. Russian-controlled utilities will transmit 1000 MWe across the border shortly after the start of operation.

#### EXPLORATION & NUCLEAR FUEL:

##### China Guangdong makes Kalahari offer

8 March 2011

A deal in the offing could give China Guangdong Nuclear Power Corporation's uranium subsidiary a major stake in the Husab uranium project in Namibia.

#### INDUSTRY TALK:

##### Shin Kori 1 enters commercial operation

10 March 2011

Shin Kori unit 1 entered commercial operation on 28 February, according to the Korea Institute of Nuclear Safety (KINS). The indigenously designed OPR-1000 is South Korea's seventh such unit and 21st nuclear power reactor overall.

##### ESBWR approaches design certification

10 March 2011

The US Nuclear Regulatory Commission has found GE-Hitachi's Economic Simplified Boiling Water Reactor (ESBWR) to be safe and technically acceptable. After five years of consideration the NRC has issued a final safety evaluation report and final design approval for the reactor. Full design certification should follow later this year.

##### Reactors continue through earthquake

9 March 2011

Nuclear power plants were barely affected by the Sanriku offshore earthquake that rocked Japan at 11.45am this morning. The earthquake measured 7.3 on the Richter scale and originated 160 kilometres offshore some 8 kilometres underground. Nuclear power plants on the Pacific coast that felt the quake include Onagawa, Higashidori and Fukushima Daini and Fukushima Daiichi.

Safe to fly where – Japan, west coast, Hawaii or anywhere

---

**From:** Couret, Ivonne  
**Sent:** Tuesday, March 15, 2011 3:22 PM  
**To:** Akstulewicz, Brenda; Steger (Tucci), Christine; Janbergs, Holly; Landau, Mindy  
**Subject:** two questions we can answer include

**Is it safe to fly?**

Yes. If events were to evolve into a situation that would result in travel being unsafe, a no fly zone would be established.

**My loved one is overseas, how do I find out if they are ok?**

We are directing public inquiries with regard to concern for loved ones overseas to the State Department, Consular Services at 202-647-7004.

**New: Nuclear Crisis in Japan**

Senate Environment and Public Works Committee (Chairwoman Boxer, D-Calif.) will hold a briefing on the ongoing crisis associated with nuclear power facilities in Japan, including potential ramifications for the United States. 3:30 p.m., 406 Dirksen

I-95

## Questions and Answers for OPA:

### **1. Can this happen here?**

The events that have occurred in Japan are the result of a combination of highly unlikely natural disasters. These include the fifth largest earthquake in recorded history and the resulting devastating tsunami. It is highly unlikely that a similar event could occur in the United States.

### **2. I live near a nuclear power plant similar to the ones having trouble in Japan. How can we now be confident that this plant won't experience a similar problem?**

U.S. nuclear power plants are built to withstand environmental hazards, including earthquakes and tsunamis. Even those plants that are located outside of areas with extensive seismic activity are designed for safety in the event of such a natural disaster. The NRC requires that safety-significant structures, systems, and components be designed to take into account the most severe natural phenomena historically reported for the site and surrounding area. The NRC is confident that the robust design of these plants makes it highly unlikely that a similar event could occur in the United States.

### **3. Has this crisis changed your opinion about the safety of U.S. nuclear power plants?**

No. The NRC remains confident that the design of U.S. nuclear power plants ensures the continued protection of public health and safety and the environment.

### **4. With all this happening, how can the NRC continue to approve new nuclear power plants?**

It is premature to speculate what, if any, effect the events in Japan will have on the licensing of new nuclear power plants.

### **5. What is the NRC doing in response to the situation in Japan?**

The NRC has taken a number of actions:

- a. Since the beginning of the event, the NRC has continuously manned its Operations Center in Rockville, MD in order to gather and examine all available information as part of the effort to analyze the event and understand its implications both for Japan and the United States.
- b. A team of 11 officials from the NRC with expertise in boiling water nuclear reactors have deployed to Japan as part of a U.S. International Agency for International Development (USAID) team.
- c. The NRC has spoken with its counterpart agency in Japan, offering the assistance of U.S. technical experts.

- d. The NRC is coordinating its actions with other Federal agencies as part of the U.S. government response.

**6. What other U.S. agencies are involved, and what are they doing?**

The entire federal family is responding to this event. The NRC is closely coordinating its efforts with the White House, DOE, DOD, USAID, and others. The U.S. government is providing whatever support requested by the Japanese government.

**7. What else can go wrong?**

The NRC is continuously monitoring the developments at the nuclear power plants in Japan. Circumstances are constantly evolving and it would be inappropriate to speculate on how this situation might develop over the coming days.

**8. What is the worst-case scenario?**

In a nuclear emergency, the most important action is to ensure the core is covered with water to provide cooling to remove any heat from the fuel rods. Without adequate cooling, the fuel rods will melt. Should the final containment structure fail, radiation from these melting fuel rods would be released to the atmosphere and additional protective measures may be necessary depending on factors such as prevailing wind patterns.

**9. The United States has troops in Japan and has sent ships to help the relief effort – are they in danger from the radiation?**

The NRC is not the appropriate federal agency to answer this question. DOD is better suited to provide information regarding its personnel.

**10. Is there a danger of radiation making it to the United States?**

In response to nuclear emergencies, the NRC works with other U.S. agencies to monitor radioactive releases and predict their path. The NRC continues to monitor information regarding wind patterns near the Japanese nuclear power plants. Nevertheless, given the thousands of miles between the two countries, Hawaii, Alaska, the U.S. Territories and the U.S. West Coast are not expected to experience any harmful levels of radioactivity.

**11. Is the U.S. government tracking the radiation released from the Japanese plants?**

Yes, a number of U.S. agencies are involved in monitoring and assessing radiation including EPA, DOE, and NRC. The best source of additional information is the Environmental Protection Agency.

**12. Has the government set up radiation monitoring stations to track the release?**

The NRC understands that EPA is utilizing its existing nationwide radiation monitoring system, RadNet, to monitor continuously the nation's air and regularly monitors drinking water, milk and precipitation for environmental radiation. EPA has publicly stated its agreement with the NRC's assessment that we do not expect to see radiation at harmful levels reaching the U.S. from damaged Japanese nuclear power plants. Nevertheless, EPA has stated that it plans to work with its federal partners to deploy additional monitoring capabilities to parts of the western U.S. and U.S. territories.

**13. The radiation "plume" seems to be going out to sea – what is the danger of it reaching Alaska? Hawaii? The west coast?**

See response to Question 10.

**14. I live in the Western United States – should I be taking potassium iodide (KI)?**

At this time, the NRC does not believe that protective measures are necessary in the United States. We do not expect any U.S. states or territories to experience harmful levels of radioactivity. In the unlikely event that circumstances change, U.S. residents should listen to the protective action decisions of their states and counties. These protective action decisions could include actions such as sheltering, evacuation, or taking potassium iodide. The NRC will provide technical assistance to the states should they request it.

**15. Are there other protective measures I should be taking?**

At this time, the NRC does not believe that protective measures are necessary in the United States. We do not expect any U.S. states or territories to experience harmful levels of radioactivity. In the unlikely event that circumstances change, U.S. residents should listen to the protective action decisions of their states and counties. These protective action decisions could include actions such as sheltering, evacuation, or taking potassium iodide. The NRC will provide technical assistance to the states should they request it. United States citizens in Japan are encouraged to follow the protective measures recommended by the Japanese government. These measures appear to be consistent with steps the United States would take.

**16. What are the risks to my children?**

See response to Question 15.

**17. My family has planned a vacation to Hawaii/Alaska/Seattle next week – is it safe to go, or should we cancel our plans?**

The NRC does not expect that residents of the United States or its territories are at any risk of exposure to harmful levels of radiation resulting from the events in Japan. Any changes to travel are a personal decision. The NRC is unaware of any travel restrictions within the United States or its territories.

**18. What are the short-term and long-term effects of exposure to radiation?**

The NRC does not expect that residents of the United States or its territories are at any risk of exposure to harmful levels of radiation resulting from the events in Japan.

On a daily basis, people are exposed to naturally occurring sources of radiation, such as from the sun or medical X-rays. The resulting effects are dependent on the strength and type of radiation as well as the duration of exposure.

**19. I am traveling to Asia (not Japan). Should I adjust my travel plans to avoid flying through plume or being contaminated once on the ground?**

The NRC is not the responsible federal agency to advise U.S. citizens on foreign travel restrictions. That responsibility belongs to the Department of State.

**20. What is the official agency to report radiation numbers and what is the public contact?**

NRC regulations require nuclear power plants to report any radiation doses detected at the plant that could be harmful to the public. This would include doses that are generated by the plant or by an external source. During an event in the U.S., it is the state's responsibility to provide protective action decisions for public health and safety. For this incident, the Japanese are responsible for reporting the public dose; nevertheless, should radiation doses be detected within the U.S., it would still be the state's responsibility to provide protective action decisions for public health and safety.

**21. How many plants are located in seismic areas?**

Although we often think of the US as having "active" and "non-active" earthquake zones, earthquakes can actually happen almost anywhere. Seismologists typically separate the US into low, moderate, and high seismicity zones. The NRC requires that every plant be designed for site-specific ground motions that are appropriate for their location. In addition, the NRC has specified a minimum ground shaking level to which the plants must be designed.

**22. Where would I get IOSAT Potassium Iodide if my city should experience fallout from the Japanese nuclear disaster? Is this the right precaution or is there anything else that can be done to protect myself?**

We do not expect any U.S. states or territories to experience harmful levels of radioactivity. As such, we do not believe that there is any need for residents of the United States to take potassium iodide. U.S. residents should listen to the protective action decisions by their states and counties. If necessary, protective action decisions could include actions such as sheltering, evacuating, or taking potassium iodide.

Additional information regarding the use of potassium iodide can be found on NRC's webpage at the following link:

<http://www.nrc.gov/about-nrc/emerg-preparedness/about-emerg-preparedness/potassium-iodide-use.html>

Since Potassium Iodide is classified as a drug. Additional information is on the Food and Drug Administration's web site. [www.fda.gov](http://www.fda.gov)

**23. My loved one is overseas, how do I find out if they are ok?**

We are directing public inquiries with regard to concern for loved ones overseas to the State Department, Consular Services at 202-647-7004.

Subject: EPA STATEMENT

This should be on the EPA website soon! I'll add it to Web EOC and show it to the ET. Note data is ONLINE!

EPA STATEMENT:

As the U.S. Nuclear Regulatory Commission has said, we do not expect to see radiation at harmful levels reaching the U.S. from damaged Japanese nuclear power plants. As part of the federal government's continuing effort to make our activities and science transparent and available to the public, the Environmental Protection Agency (EPA) will continue to keep all RadNet data available in the current online database. In addition, EPA plans to work with its federal partners to deploy additional monitoring capabilities to parts of the western U.S. and U.S. territories.

As always, EPA is utilizing this existing nationwide radiation monitoring system, RadNet, which continuously monitors the nation's air and regularly monitors drinking water, milk and precipitation for environmental radiation. The RadNet online searchable database contains historical data of environmental radiation monitoring data from all fifty states and U.S. territories.

###

NOTE: RadNet air monitoring data can be always be viewed on EPA's Central Data Exchange (CDX) website at [www.epa.gov/cdx](http://www.epa.gov/cdx).

Terry,

We understand your concerns. At this time, given the results of the monitoring and distance between Japan and Hawaii, Alaska, U.S. Pacific Territories and the U.S. West Coast, the NRC expects the U.S. to AVOID any harmful levels of radioactivity. If you are interested in following the NRC response to the situation in Japan, you can do so on our public website through our press releases and public blog:

<http://www.nrc.gov/reading-rm/doc-collections/news/2011/>

<http://public-blog.nrc-gateway.gov/>

I hope this answers your question.

Thank you,  
Bethany

**Date:** Tuesday, March 15, 2011 4:18:45 PM

---

Mr. Schramer,

We understand your concerns. At this time, given the results of the monitoring and distance between Japan and Hawaii, Alaska, U.S. Pacific Territories and the U.S. West Coast, the NRC expects the U.S. to AVOID any harmful levels of radioactivity. Below are some answers to frequently asked questions and links with more information.

Is it safe to fly?

Yes. If events were to evolve into a situation that would result in travel being unsafe, a no fly zone would be established.

My loved one is overseas, how do I find out if they are ok?

We are directing public inquiries with regard to concern for loved ones overseas to the State Department, Consular Services at 202-647-7004.

How do I protect myself against radiation?

Get information and Be Informed through citizen guide at ready.gov

<http://www.ready.gov/america/beinformed/index.html>

<http://www.ready.gov/america/beinformed/shelter.html>

I trust this provides requested information.

Dear NRC friends,

Does the NRC or some other US government agency currently track the plume of radiation coming off of the damaged Japanese nuclear reactors, and is that information being made available to the public via a website? This seems like the very least the US government should be doing to inform the citizenry of the potential dangers, or lack of dangers, from the ongoing crisis in Japan's nuclear power industry.

Many thanks,

Regards,

William R. Seaman  
Portland, OR

Transients are usually referred too as the response of the reactor to postulated equipment failures or malfunctions. As part of the application for operating a nuclear power plant, licensees must analyze for these postulated events to demonstrate that the reactor can be safely operated and public health and safety is protected.

**To:** Brenner, Eliot  
**Subject:** Federal News Transcript

Eliot,

I just spoke with Federal News and they see two House Energy & Commerce Hearings tomorrow.

1. DOE & NRC Budget
2. Made in America – Increasing Jobs in Export & Trade

The DOE & NRC Budget could run between 2/3 hours and a cost estimate is \$975 for same day and \$885 for next day.

Please let me know what you want to do?

Val

**Cc:** Couret, Ivonne  
**Subject:** RE: Request - define Transients - Bloomberg News in Tokyo

Transients are usually referred too as the response of the reactor to postulated equipment failures or malfunctions. As part of the application for operating a nuclear power plant, licensees must analyze for these postulated events to demonstrate that the reactor can be safely operated and public health and safety is protected.

**To:** Jasinski, Robert; Landau, Mindy; Tobin, Jennifer; Zuberi, Sardar; Ridge, Christianne; Deavers, Ron  
**Subject:** Internal Call Center

There is a chance we will start up a small Internal Call Center to answer calls from the public concerned about radiation, etc.

It is not certain, but possible. I'll be looking for help staffing the center. You will have a script to use and will be located in TWFN Fourth Floor conference room.

Please let me know if you'll have availability/interest in doing this.

Mindy – can you spread the word through the Communication Council, too. The more volunteers the better . . .

Thank you,

Holly

**Sent:** Wed Mar 16 18:57:58 2011  
**Subject:** Bethany's Quick Review of Testimony

Bethany spent most of the day watching the testimony today. I understand we'll be getting full transcript soon (not sure by what process), but I asked Bethany to compile what appeared to be the major questions/comments posed to the Chairman:

Sen. Boxer: You're doing nothing new. Other countries are responding to the situation, but I don't see anything proactive being done in the U.S. I have two plants in California that were built based on 1970s assumptions. It's 2011. I know there's at least one new report on seismic activity we haven't seen action on. My fellow senator and I want to see more leadership from the NRC than we've gotten.

Reps. Whitfield/Markey/Doyle: Have you had an opportunity to review John Ma's concerns on the AP1000 design? What was the process that took place following his objections?

Rep. Shimkus: I don't believe your actions on Yucca Mountain were consistent with your legal authority. Federal position by law is that Yucca should be open, and there is no legal authority to close the repository. The only decision that's been rendered is that of the administration to pull funding. I hope you're well-prepared to have a further debate on the legal authority of the NRC in this regard.

Rep. Markey: Does the NRC recommend use of KI in emergency situations in the United States? It should be your position to recommend it, as State and local government officials don't have the expertise to do so.

Rep. Markey: We need to re-examine the idea of "maximum credible earthquake."

Rep. Dingell: You have an unholy mess on your hands with the Yucca Mountain situation. Are there any long-term plans to handle the repository matter anywhere in the government?

Reps. Rush/Cassidy/Dingell: Do our plants' safety standards adequately address the types

I-168

of problems we've seen in Japan, where there were multiple cascading events?

Reps. Cassidy: Do our plants' safety standards adequately address the problems that can occur with loss of site power?

**From:** Janbergs, Holly  
**To:** Burnell, Scott  
**Subject:** Jaczko Interview Request  
**Date:** Wednesday, March 16, 2011 6:52:00 PM

---

Erica Hill from the Early Show on CBS would like Jaczko to do a live spot in their morning show from 7-9 to update on the situation in Japan. She's also willing to pretape. I told her it was not likely but I would put her name into the queue.

I-1710

**Subject:** Senate Hearing Qs

Missed the first few minutes while typing up qs from House hearing, so I missed Boxer's apparently brutal first round of questions to Borchardt.

Inhofe: Do you agree with Chu's statements on safety of plants?

Jaczkco: We work every day to keep plants safe and secure, but we'll input any lessons learned

Inhofe: Did you coordinate with him on statements?

Jaczkco: We're an independent body but we're working with gov't on assisting Japan

Inhofe: Assistance?

Jaczkco: 11 experts, working with regulators, make suggestions & recommendations on equipment and strategies, etc

Sanders: (list of issues in Japan, discussion of US Mark I reactors, quotes NYT GE article about warnings on design)

Sanders: Will NRC reevaluate its recommendation on VY's extension?

Jaczkco: Modifications will be based on what we learn; if we find info that says changes needed, we'll input it

Sanders: (NYT quote again about warnings)

Jaczkco: Yes, there have been concerns, but we think we've made changes to improve. There are two specific ones to that design to deal with some problems. We believe we have a good system & program in place

Sanders: I'm sure you do but VT is not reassured

Lautenberg: NYT article discusses warnings – how did these Mark I plants manage to get built?

Jaczkco: I believe some came into service after 1972. But they're not exactly the same; like planes that may be vintage but still fly because systems have been upgraded & modifications made.

Lautenberg: Airplanes are not a fair analogy, and you show poor judgment in using that. This situation is scaring everyone; what can be done to assure safety? Would you license a new plant based on this design?

Jaczkco: I don't want to speculate on a specific design, it's a process

Lautenberg: Do you think a licensee would want to?

Jaczkco: We don't have detailed info on what happened in Japan yet, so I don't know

Lautenberg: In Japan they have a lot of experience with their plants; are you saying these upgrades you mentioned weren't done?

Jaczkco: I don't know what upgrades they do in Japan

Lautenberg: They thought they could handle it and that wasn't the case. How can we know?

Jaczkco: We have systematic program to monitor safety & systems of plants, we do analysis to look at accidents, we plan for things. After 9/11 changes were made to deal with attacks but those end up supporting accident scenarios too

Carper: NRC encourages safety culture but we want to see it at all plants.

Carper: How can we put lessons learned to work?

Jaczkco: At this pt no detailed plan yet, important to approach it systematically & methodically – use good facts so we can make good decisions

Carper: A lot of folks weren't alive for Chernobyl & TMI; could you explain differences?

Jaczko: This is serious situation that will continue for some time, we don't know how it will unfold yet. TMI had mechanical probs & human error, core had some melting contained w/ structure. Chernobyl was different event, large release of radioactive material in very short span of time + explosion. (analogy) difference between popping a balloon and having a balloon leak over long period of time

Carper: How many people died from Chernobyl?

Jaczko: Unsure of numbers; for tmi no direct fatalities

Carper: How many lives have been lost from nuke plants?

Jaczko: none from plants. Sometimes radiation contamination occurs in supporting industries.

Carper: that's a good record, but we can still do better

Gillibrand: Nation faces other risk than physical – cyberterrorism, etc

Jaczko: We have program in place to deal with cyber security. Most systems don't involve digital systems, but licensees still have to come up with plans to deal with cyber issues

Gillibrand: What kind of modifications will be made?

Jaczko: security-wise, I can't get specific

Gillibrand: We should increase redundancies for outages

Jaczko: Robust security requirements, conduct exercises to protect plants from external threats, all plants post-9/11 implemented procedures & equipment to mitigate fires & explosions – industry also prestages other equipment they might need

Gillibrand: (cites msnbc piece on report published re: NRC only having detailed seismic data on plant fragility for 1/3 of plants)

Jaczko: Unfamiliar with that piece, but we've been working on updated analysis for central & eastern plants. We're always looking for new info and then make a determination if immediate action needs to be taken – in this case no

Gillibrand: Can you retrofit or enhance old plants to make them safer in light of reviews?

Jaczko: If necessary that's what we'll do

Gillibrand: How long would that take?

Jaczko: I don't want to speculate, but there are no immediate safety concerns

Boxer: Please don't compare what happened in Japan to airplanes

Jaczko: I was likening the way models are retrofitted, that's all

Boxer: You said dealing with a situation like what happened in Japan is straightforward – it just involves cooling the plant. So what went wrong?

Jaczko: I don't want to speculate

Boxer: Either you are criticizing Japan or you're leaving a lot of questions for US unanswered.

Boxer: Tell me about seriousness of seismic activity and how many plants are in each zone

Jaczko: We'll give you that info

Boxer: LA Times said a CA tsunami could come without warning. I'm very concerned. This Japanese plant was built to withstand some things and got worse events. Given the stakes, this is worrying. 7 million people live close to San Onofre; ½ million near Diablo Canyon. You've suggested Americans move 50 miles from Fukushima. Feinstein and I want an immediate look at our plants. Go back and read the 2008 report that there could be new issues at San Onofre, and get back to me.

Boxer: You're doing nothing new. All the other countries are doing things, but I don't hear anything proactive. Why shouldn't I be worried?

Jaczko: We're going to be looking at what happens in Japan, we're not doing nothing

Boxer: Isn't this a warning that we should be humbled. Is not issuing new license too much to ask? I need reassurance

Jaczko: We're going to move forward w/ review. I don't know Japanese review system. We have a lot of safeguards to deal with unknown unknowns

Boxer: I have 2 plants in CA built w/ 1970s assumptions. It's 2011. I'm telling you there's at least 1 new report we haven't seen action on. Feinstein and I are gonna follow up on this; we want more leadership than we've gotten

Lautenberg: Should we restudy evacuation routes? What's a safe distance for families? Have we found changes in climate?

Jaczko: Those are all issues we want to consider. We'll have to see what happened in Japan and what worked. I've never seen this agency shy away from making a change. Even just local changes in weather patterns can affect plants, and we make those changes. What you express are things I worry about and try to make sure there are programs to deal with that are well grounded in scientific fact.

Lautenberg: How close were our warships that noted elevated rad ratings?

Jaczko: My understanding is 100 mi away, they received low-level radiation not unexpected and consistent with cooling process.

Lautenberg: Does that tell us something about kind of risk

Jaczko: I'm aware of rad detection at levels not harmful to public health & safety

(Boxer asks for rad monitoring info in Japan, Jaczko says he will provide)

Hello-

Off the record - we are checking with you and anyone else at NRC to see if there are any additional precautions we should take with our teams on the ground in Japan based on changing conditions within the last six hours.

This is not a news request, it's a safety inquiry.

We are trying to determine the best route for the network - can someone/anyone at NRC call our National Desk tonight with any updated guidance at 212-975-4114, we are trying to make some immediate decisions.

Any guidance from the experts at NRC would be most appreciated, thank you very much,

Sorry to bother you so late,

Just noting that the response below can be used to respond to State requests at this time.

Quynh – Can this be put up on the SharePoint site you are developing?

**Although we typically provide the state with nonpublic pre-decisional information and security related information (including safeguards information) related to the nuclear power plants in your state, due to the international nature of the event coupled with the difficulty of receiving clear, consistent, and accurate information from another country during their ongoing crisis, the NRC is unable to provide information on the magnitude of the release. We can say, that at this time, it does not appear that harmful levels of radiation will reach any part of the U.S., including Alaska and Hawaii.**

**Subject:** Questions NRC RI Is Receiving - RESPONSE NEEDED ASAP  
**Importance:** High

1. How is it that the NRC has always defined the emergency planning zone to be out to 10 miles based on worse case scenarios, yet they just recommended a 50 mile evacuation?
2. What does a PAR out to 50 miles say about the current 10 mile EPZ used here in the United States?

**Subject:** News Article

This is the article that is generating a lot of concern/discussion w/NY. Since this is Region I, I will pass along to Diane Screnci, OPA, Region I. For now, we've talked w/NY and they are good.

## What are the odds? US nuke plants ranked by quake risk

What are the odds that a nuclear emergency like the one at Fukushima Dai-ichi could happen in the central or eastern United States? They'd have to be astronomical, right? As a pro-nuclear commenter on msnbc.com put it this weekend, "There's a power plant just like these in Omaha. If it gets hit by a tsunami...."

I-185

It turns out that the U.S. Nuclear Regulatory Commission has calculated the odds of an earthquake causing catastrophic failure to a nuclear plant here. Each year, at the typical nuclear reactor in the U.S., there's a 1 in 74,176 chance that the core could be damaged by an earthquake, exposing the public to radiation. That's 10 times more likely than you winning \$10,000 by buying a ticket in the Powerball multistate lottery, where the chance is 1 in 723,145.

And it turns out that the nuclear reactor in the United States with the highest risk of core damage from a quake is not the Diablo Canyon Power Plant, with its twin reactors tucked between the California coastline and the San Andreas Fault.

It's not the San Onofre Nuclear Generating Station, a four-hour drive down the Pacific coast at San Clemente, surrounded by fault lines on land and under the ocean.

It's not on the Pacific Coast at all. It's on the Hudson River.

One in 10,000

The reactor with the highest risk rating is 24 miles north of New York City, in the village of Buchanan, N.Y., at the Indian Point Energy Center. There, on the east bank of the Hudson, Indian Point nuclear reactor No. 3 has the highest risk of earthquake damage in the country, according to new NRC risk estimates provided to msnbc.com.

So much for San Andreas: Reactors in East, Midwest, South have highest chance of damage  
A ranking of the 104 nuclear reactors is shown at the bottom of this article, listing the NRC estimate of risk of catastrophic failure caused by earthquake.

The chance of a core damage from a quake at Indian Point 3 is estimated at 1 in 10,000 each year. Under NRC guidelines, that's right on the verge of requiring "immediate concern regarding adequate protection" of the public. The two reactors at Indian Point generate up to one-third of the electricity for New York City. The second reactor, Indian Point 2, doesn't rate as risky, with 1 chance in 30,303 each year.

The plant with the second highest risk? It's in Massachusetts. Third? Pennsylvania. Then Tennessee, Pennsylvania again, Florida, Virginia and South Carolina. Only then does

California's Diablo Canyon appear on the list, followed by Pennsylvania's Three Mile Island.

Overall, the new estimates mean that nuclear power plants built in the areas usually thought of as earthquake zones, such as the California coastline, are no longer those with the highest risk of damage from an earthquake.

Other plants in the East, South and Midwest, where the design standards may have been lower because the earthquake risk was thought to be low, have moved to the top of the NRC's danger list.

The chance ranges from Indian Point's 1 in 10,000, all the way up to 1 in 500,000 each year at the Callaway plant in Fulton, Missouri.

Playing the odds

The NRC, the federal agency responsible for nuclear power safety, says the odds are in the public's favor. "Operating nuclear power plants are safe," the NRC said when it reported the new risk estimates.

Every plant is designed with a margin of safety beyond the strongest earthquake anticipated in that area, the NRC says.

But the NRC also says the margin of safety has been reduced.

In the 35 years since Indian Point 3 got its license to operate in 1976, the same era when most of today's U.S. nuclear reactors were built, geologists have learned a lot about the dangers of earthquakes in the eastern and central U.S.

No one alive now has memories of the South Carolina quakes of 1886, which toppled 14,000 chimneys in Charleston and were felt in 30 states. Or the New Madrid quakes of 1811-1812 in Missouri and Arkansas — the big one made the Mississippi River run backward for a time.

But the geologists and seismologists remember, learning their history from rocks, and steadily raising their estimates of the risk of severe quakes. New faults are found, and new computer models change predictions for how the ground shakes. The latest estimates are drawn from the 2008 maps of the U.S. Geological Survey. Of special note, the USGS said, was an allowance for waves of large earthquakes in the New Madrid fault area

roughly centered on the Missouri Bootheel, as well as inclusion of offshore faults near Charleston, S.C., and new data from the mountains of East Tennessee. With each new map, the areas of negligible risks have receded.

Based on those new maps, the NRC published in August 2010 new estimates of the earthquake risk at nuclear power reactors in the eastern and central states. Besides the proximity, severity and frequency of earthquakes, the new estimates take into account the design standards used at each plant, along with the type of rock or soil it's built on. This week, the NRC provided additional data to msnbc.com for the relatively few reactors in the Western states, allowing a ranking to be made of all 104 reactors with the latest data.

#### The top 10

Here are the 10 nuclear power sites with the highest risk of suffering core damage from an earthquake, showing their NRC risk estimates based on 2008 and 1989 geological data. (The full list of 104 reactors is below.)

1. Indian Point 3, Buchanan, N.Y.: 1 in 10,000 chance each year. Old estimate: 1 in 17,241. Increase in risk: 72 percent.

advertisement U.S. Geological Survey Based on 1982 data, a map of earthquake damage risk in the continental United States. The highest risk areas are red, yellow and purple. U.S. Geological Survey Based on 1969 data, a map of earthquake damage risk in the continental United States. The highest risk areas are red and yellow.

2. Pilgrim 1, Plymouth, Mass.: 1 in 14,493. Old estimate: 1 in 125,000. Increase in risk: 763 percent.

3. Limerick 1 and 2, Limerick, Pa.: 1 in 18,868. Old estimate: 1 in 45,455. Increase in risk: 141 percent.

4. Sequoyah 1 and 2, Soddy-Daisy, Tenn.: 1 in 19,608. Old estimate: 1 in 102,041. Increase in risk: 420 percent.

5. Beaver Valley 1, Shippingport, Pa.: 1 in 20,833. Old estimate: 1 in 76,923. Increase in risk: 269 percent.

6. Saint Lucie 1 and 2, Jensen Beach, Fla.: 1 in 21,739. Old estimate: N/A.

7. North Anna 1 and 2, Louisa, Va.: 1 in 22,727. Old estimate: 1 in 31,250. Increase in risk: 38 percent.

8. Oconee 1, 2 and 3, Seneca, S.C.: 1 in 23,256.  
Old estimate: 1 in 100,000. Increase in risk:  
330 percent.

9. Diablo Canyon 1 and 2, Avila Beach, Calif.: 1  
in 23,810. Old estimate: N/A.

10. Three Mile Island, Middletown, Pa.: 1 in  
25,000. Old estimate: 1 in 45,455. Increase in  
risk: 82 percent.

A rising risk

Northeast of Chattanooga, Tenn., the  
Tennessee Valley Authority's Sequoyah 1 and  
2 nuclear plants had been thought to have a  
risk of core damage from an earthquake  
happening once every 102,041 years. The new  
estimate is once every 19,608 years.

That kind of change was typical. Out of 104  
reactors, the risk estimate declined at only  
eight. (There were 19 for which no older  
estimate was available for comparison.)

The increase in risk is so rapid that an NRC  
research task force in September sent two  
recommendations to NRC management:

First, it is time to move the issue over from the  
research staff to the regulatory staff, moving  
from study to action.

Second, start figuring out whether some  
nuclear power plants need a "backfit," or  
additional construction to protect them from  
earthquakes.

Another indication of how fast the risk  
estimates rose: The median, or middle value  
out of all 104 reactors, a measure of the risk  
at the typical plant, is now at a 1 in 74,176  
chance each year of core damage from a  
quake. In the old estimate, it was 1 in 263,158.  
In other words, the estimated risk, though still  
low by NRC standards, has more than tripled.

What happens next?

This NRC process began in 2005 when its staff  
recommended taking a look at updated  
seismic hazards. It was late 2008 before NRC  
advertisement

staff started working with a contractor,  
Electric Power Research Institute, on the  
design of a study. Overall, it took five years  
and three months from the staff  
recommendation until the seismic task force  
submitted its report in August 2010.

One problem is a lack of data about the nuclear reactors themselves. The NRC task force said the agency has detailed data on what it calls plant fragility — the probability that the expected earthquake would damage the reactor's core — for only one-third of the nation's nuclear plants. That's because only the plants that had been thought to be in areas of higher seismic risk had done detailed studies. For the rest, the scientists had to estimate from other information submitted by plant operators.

Now the NRC is playing catch-up.

An NRC spokesman, Scott Burnell, said Tuesday that the NRC is preparing a letter to send to certain nuclear plants, asking them for the more detailed data on equipment, soil conditions and seismic preparedness. Then the plants and NRC staff will have an opportunity to analyze that data.

That process could stretch into 2012, Burnell said. Then the NRC will have to decide, he said, "where the ability to respond to seismic events can be improved."

In the middle of that process, perhaps late this year, a new round of geologic data will come out. That will be folded into new calculations.

Industry is "addressing that issue"  
The nuclear power industry is watching this process. A document distributed to the public by the industry's Nuclear Energy Institute on Sunday, after the Japanese plant emergency began, referred to this NRC study and the possibility of changes, saying, "The industry is working with the NRC to develop a methodology for addressing that issue."

The industry statement did not mention that the study increased the estimates of earthquake risk for nearly every nuclear power plant in the U.S.

(One of the leading nuclear power companies, General Electric, which designed the reactors at Fukushima, is a part owner of NBCUniversal, which co-owns msnbc.com through a joint venture with Microsoft.)

Good odds or bad?  
How much risk is too much? Is a roller coaster safe only if no one ever dies? If one passenger dies every 100 years? Every year?

When the NRC saw that the new earthquake maps had pushed the level of risk into the range between 1 in 100,000 and the more likely 1 in 10,000, that change was enough to study the issue further, the task force said in its report. But because the risks didn't go beyond 1 in 10,000, "there was no immediate concern regarding adequate protection." The advertisement

new estimates put Indian River right at that boundary, and a few others in reach.

By comparison, the chance of winning the grand prize in the next Powerball lottery: 1 in 195,249,054.

Ranking of nuclear reactors by earthquake damage risks

Here are the 104 nuclear power reactors in the United States, ranked by the NRC's estimate of the risk each year that an earthquake would cause damage to the reactor's core, releasing radiation.

Notes: Data come from the NRC's study of August 2010 on reactors in the central and eastern states, supplemented by data provided by the NRC to msnbc.com in March 2011. The table shows the risks calculated separately from 1989 and 2008 earthquake data from the U.S. Geological Survey. Ranks and changes in risk are calculated by msnbc.com. For the reactors in the western states, and a few others, the 1989 estimate was not provided to msnbc.com, so no change is calculated. The information in this list is also available in an Excel spreadsheet file. (See resources, below.)

Rank. Reactor, nearby city, state: Chance of event each year from 2008 data. Old estimate from 1989. Change in risk.

1. Indian Point 3, Buchanan, N.Y.: 1 in 10,000 chance each year. Old estimate: 1 in 17,241. Change in risk: 72 percent.

2. Pilgrim 1, Plymouth, Mass.: 1 in 14,493 chance each year. Old estimate: 1 in 125,000. Change in risk: 763 percent.

3. Limerick 1, Limerick, Pa.: 1 in 18,868 chance each year. Old estimate: 1 in 45,455. Change in risk: 141 percent.

3. Limerick 2, Limerick, Pa.: 1 in 18,868 chance each year. Old estimate: 1 in 45,455. Change in risk: 141 percent.

5. Sequoyah 1, Soddy-Daisy, Tenn.: 1 in

19,608 chance each year. Old estimate: 1 in 102,041. Change in risk: 420 percent.

5. Sequoyah 2, Soddy-Daisy, Tenn.: 1 in 19,608 chance each year. Old estimate: 1 in 102,041. Change in risk: 420 percent.

7. Beaver Valley 1, Shippingport, Pa.: 1 in 20,833 chance each year. Old estimate: 1 in 76,923. Change in risk: 269 percent.

8. Saint Lucie 1, Jensen Beach, Fla.: 1 in 21,739 chance each year. Old estimate: N/A. Change in risk: N/A.

8. Saint Lucie 2, Jensen Beach, Fla.: 1 in 21,739 chance each year. Old estimate: N/A. Change in risk: N/A.

10. North Anna 1, Louisa, Va.: 1 in 22,727 chance each year. Old estimate: 1 in 31,250. Change in risk: 38 percent.

10. North Anna 2, Louisa, Va.: 1 in 22,727 advertisement chance each year. Old estimate: 1 in 31,250. Change in risk: 38 percent.

12. Oconee 1, Seneca, S.C.: 1 in 23,256 chance each year. Old estimate: 1 in 100,000. Change in risk: 330 percent.

12. Oconee 2, Seneca, S.C.: 1 in 23,256 chance each year. Old estimate: 1 in 100,000. Change in risk: 330 percent.

12. Oconee 3, Seneca, S.C.: 1 in 23,256 chance each year. Old estimate: 1 in 100,000. Change in risk: 330 percent.

15. Diablo Canyon 1, Avila Beach, Calif.: 1 in 23,810 chance each year. Old estimate: N/A. Change in risk: N/A.

15. Diablo Canyon 2, Avila Beach, Calif.: 1 in 23,810 chance each year. Old estimate: N/A. Change in risk: N/A.

17. Three Mile Island 1, Middletown, Pa.: 1 in 25,000 chance each year. Old estimate: 1 in 45,455. Change in risk: 82 percent.

18. Palo Verde 1, Wintersburg, Ariz.: 1 in 26,316 chance each year. Old estimate: N/A. Change in risk: N/A.

18. Palo Verde 2, Wintersburg, Ariz.: 1 in 26,316 chance each year. Old estimate: N/A.

Change in risk: N/A.

18. Palo Verde 3, Wintersburg, Ariz.: 1 in 26,316 chance each year. Old estimate: N/A.  
Change in risk: N/A.

A few words about the data (Where's Richter?)

The NRC's risk estimates are not based on the

usual layman's language of the magnitude scale (the old Richter scale or its replacement, the moment magnitude scale). Magnitude shows the earthquake's energy released. That is a measure of power.

But a nuclear plant may be close to the epicenter of a quake, or far from it. And some types of seismic waves are more jarring than others.

Instead, these risk estimates consider how violently the ground will shake at the nuclear plant, considered a better indication of how much damage it will cause. That shaking can be affected by the depth, distance from the epicenter, and the frequencies of waves that the quake emits. The shaking is expressed in a unit called peak ground acceleration, in terms of the acceleration caused by the Earth's gravity. This is a measure of intensity.

Often these two ways of measuring earthquakes are roughly in synch, but sometimes not. For example:

The 2010 Haiti earthquake, magnitude 7.0, rated only "severe" on the intensity scale, the third rung from the top, with peak ground acceleration of 0.5 times the Earth's gravity.

The 2010 Chile earthquake, with a much higher magnitude of 8.8, was one step

advertisement How much radiation is dangerous?

higher in terms of intensity, "violent," with peak ground acceleration of 0.65

times gravity.

The 2010 Christchurch or Canterbury earthquake in New Zealand, similar to Haiti at magnitude 7.1, was at the top of the intensity scale, "extreme," with a peak ground acceleration of 1.26 times gravity.

Besides the peak acceleration, the NRC made other estimates for each nuclear plant, based on different types of earthquakes.

From all these estimates, the NRC calculated a worst case, which it called the "weakest link." Msnbc.com ranked the plants by that worst case, which is the same number the NRC staff highlights in its report, and the only number it provided for the reactors in the western states.

A look at the worst earthquakes in recorded history, in loss of human life. (These figures do not include the March 11, 2011, temblor off eastern Japan, the death toll of which is still not known.) Sources: United States Geological Survey, Encyclopedia Britannica advertisement

1: Shensi, China, Jan. 23, 1556

Magnitude about 8, about 830,000 deaths.

This earthquake occurred in the Shaanxi province (formerly Shensi), China, about 50 miles east-northeast of Xi'an, the capital of Shaanxi. More than 830,000 people are estimated to have been killed. Damage extended as far away as about 270 miles

northeast of the epicenter, with reports as far as Liuyang in Hunan, more than 500 miles away. Geological effects reported with this earthquake included ground fissures, uplift, subsidence, liquefaction and landslides. Most towns in the damage area reported city walls collapsed, most to all houses collapsed and many of the towns reported ground fissures with water gushing out.

2: Tangshan, China, July 27, 1976

Magnitude 7.5. Official casualty figure is 255,000 deaths. Estimated death toll as high as 655,000.

Damage extended as far as Beijing. This is probably the greatest death toll from an earthquake in the last four centuries, and the second greatest in recorded history.

3: Aleppo, Syria, Aug. 9, 1138

Magnitude not known, about 230,000 deaths.

Contemporary accounts said the walls of Syria's second-largest city crumbled and rocks cascaded into the streets. Aleppo's citadel collapsed, killing hundreds of residents. Although Aleppo was the largest community affected by the earthquake, it likely did not suffer the worst of the damage. European Crusaders had constructed a citadel at nearby Harim, which was leveled by the quake. A Muslim fort at Al-Atarib was destroyed as well, and several smaller towns and manned forts were reduced to rubble. The quake was said to have been felt as far away as Damascus, about 220 miles to the south. The Aleppo earthquake was the first of several occurring between 1138 and 1139 that devastated areas in northern Syria and western Turkey.

4: Sumatra, Indonesia, Dec. 26, 2004

advertisement Advertise | AdChoices Keystone / Getty Images 1976: Workers start rebuilding work following earthquake damage in the Chinese city of Tangshan, 100 miles east of Pekin, with a wrecked train carriage behind them. (Photo by Keystone/Getty Images)

Magnitude 9.1, 227,898 deaths.

This was the third largest earthquake in the world since 1900 and the largest since the 1964 Prince William Sound, Alaska temblor. In total, 227,898 people were killed or were missing and presumed dead and about 1.7 million people were displaced by the earthquake and subsequent tsunami in 14

countries in South Asia and East Africa. (In January 2005, the death toll was 286,000. In April 2005, Indonesia reduced its estimate for the number missing by over 50,000.)

5: Haiti, Jan 12, 2010

According to official estimates, 300,000 were also injured, 1.3 million displaced, 97,294 houses destroyed and 188,383 damaged in the Port-au-Prince area and in much of southern Haiti. This includes at least 4 people killed by a local tsunami in the Petit Paradis area near Leogane. Tsunami waves were also reported at Jacmel, Les Cayes, Petit Goave, Leogane, Luly and Anse a Galets.

6: Damghan, Iran, Dec. 22, 856

Magnitude not known, about 200,000 deaths.

This earthquake struck a 200-mile stretch of northeast Iran, with the epicenter directly below the city of Demghan, which was at that point the capital city. Most of the city was destroyed as well as the neighboring areas. Approximately 200,000 people were killed.

7: Haiyuan, Ningxia , China, Dec. 16, 1920

7.8 magnitude, about 200,000 deaths.

This earthquake brought total destruction to the Lijunbu-Haiyuan-Ganyanchi area. Over 73,000 people were killed in Haiyuan County. A landslide buried the village of Sujiahe in Xiji County. More than 30,000 people were killed in Guyuan County. Nearly all the houses collapsed in the cities of Longde and Huining. About 125 miles of surface faulting was seen from Lijunbu through Ganyanchi to Jingtai. There were large numbers of landslides and ground cracks throughout the epicentral area. Some rivers were dammed, others changed course.

advertisement Getty Images / Getty Images MEULABOH, INDONESIA - DECEMBER 29: In this handout photo taken from a print via the Indonesian Air Force, the scene of devastation in Meulaboh, the town closest to the Sunday's earthquake epicentre, is pictured from the air on December 29, 2004, Meulaboh, Aceh Province, Sumatra, Indonesia. The western coastal town in Aceh Province, only 60 kilometres north-east of the epicentre, has been the hardest hit by Sunday's underwater earthquake in the Indian Ocean. Officials expected to find at least 10,000 killed which would amount to a quarter of Meulaboh's population. Three-quarters of Sumatra's western coast was destroyed and some towns were totally wiped out after the tsunamis that followed the earthquake. (Photo by Indonesian Air Force via Getty Images) Advertise | AdChoices

8: Ardabil, Iran, March. 23, 893

Magnitude not known, about 150,000 deaths

The memories of the massive Damghan earthquake (see above) had barely faded when only 37 years later, Iran was again hit by a huge earthquake. This time it cost 150,000 lives and destroyed the largest city in the northwestern section of the country. The area was again hit by a fatal earthquake in 1997.

9: Kanto, Japan, Sept. 1, 1923

7.9 magnitude, 142,800 deaths.

This earthquake brought extreme destruction in the Tokyo-Yokohama area, both from the temblor and subsequent firestorms, which burned about 381,000 of the more than 694,000 houses that were partially or completely destroyed. Although often known as the Great Tokyo Earthquake (or the Great Tokyo Fire), the damage was most severe in Yokohama. Nearly 6 feet of permanent uplift was observed on the north shore of Sagami Bay and horizontal displacements of as much as 15 feet were measured on the Boso Peninsula.

This earthquake brought extreme destruction in the Tokyo-Yokohama area, both from the temblor and subsequent firestorms, which burned about 381,000 of the more than 694,000 houses that were partially or completely destroyed. Although often known as the Great Tokyo Earthquake (or the Great Tokyo Fire), the damage was most severe in Yokohama. Nearly 6 feet of permanent uplift was observed on the north shore of Sagami Bay and horizontal displacements of as much as 15 feet were measured on the Boso Peninsula.

10: Ashgabat, Turkmenistan, Oct. 5, 1948

7.3 magnitude, 110,000 deaths.

This quake brought extreme damage in Ashgabat (Ashkhabad) and nearby villages, where almost all the brick buildings collapsed, concrete structures were heavily damaged and freight trains were derailed. Damage and casualties also occurred in the Darreh Gaz area in neighboring Iran. Surface rupture was observed both northwest and southeast of Ashgabat. Many sources list the casualty total at 10,000, but a news release from the newly independent government on Dec. 9, 1988, advised that the correct death toll was 110,000. (Turkmenistan had been part of the Soviet Union, which tended to downplay the death tolls from man-made and natural

disasters.)

**Subject:** RE: Questions NRC RI Is Receiving - RESPONSE NEEDED ASAP

Suggest this:

The 10-mile EPZ reflects the area expected to be affected by design basis accidents at nuclear power plants, and we are confident that it would be adequate even for severe accidents. However, the 10-mile zone was always considered a base for emergency response that could be expanded if the situation warranted. The situation in Japan, with four reactors experiencing exceptional difficulties simultaneously, creates the need to expand the EPZ beyond the normal 10-mile radius.

We have said from the beginning of this crisis that the NRC would analyze this situation for any lessons that can be derived to improve our oversight of U.S. nuclear power plants. Emergency protection planning will be part of that review.

**To:** LIA04 Hoc; OST05 Hoc  
**Subject:** Questions NRC RI Is Receiving - RESPONSE NEEDED ASAP  
**Importance:** High

1. How is it that the NRC has always defined the emergency planning zone to be out to 10 miles based on worse case scenarios, yet they just recommended a 50 mile evacuation?
2. What does a PAR out to 50 miles say about the current 10 mile EPZ used here in the United States?

**Subject:** Internal Call Center

There is a chance we will start up a small Internal Call Center to answer calls from the public concerned about radiation, etc.

It is not certain, but possible. I'll be looking for help staffing the center. You will have a script to use and will be located in TWFN Fourth Floor conference room.

Please let me know if you'll have availability/interest in doing this.

Mindy – can you spread the word through the Communication Council, too. The more volunteers the better . . .

Thank you,

Holly

**From:** Operations Center Bulletin  
**Sent:** Wednesday, March 16, 2011 10:40 AM  
**To:** Operations Center Bulletin  
**Subject:** UPDATE: NRC IS RESPONDING TO JAPANESE EVENTS

### THIS IS NOT A DRILL

**The Office of Public Affairs is expecting a large volume of calls from media and the general public regarding the latest statements from the State Department and the NRC regarding the situation in Japan. ALL CALLS from media or the general public on this topic must be referred to the 301-415-8200 number.**

The NRC is coordinating its actions with other Federal agencies as part of the U.S. government response to the events in Japan. The NRC is examining all available information as part of the effort to analyze the event and understand its implications both for Japan and the United States. The NRC's Headquarters Operations Center in Rockville, MD has been stood up since the beginning of the emergency in Japan and is operating on a 24-hour basis.

NRC Incident Responders at Headquarters have spoken with the agency's counterpart in Japan and offered the assistance of U.S. technical experts. NRC representatives with expertise on boiling water nuclear reactors have deployed to Japan as part of a U.S. International Agency for International Development (USAID) team. USAID is the Federal government agency primarily responsible for providing assistance to countries recovering from disasters.

U.S. nuclear power plants are built to withstand environmental hazards, including earthquakes and tsunamis. Even those plants that are located outside of areas with extensive seismic activity are designed for safety in the event of such a natural disaster. The NRC requires that safety significant structures, systems, and components be designed to take in account the most severe natural phenomena historically estimated for the site and surrounding area.

The NRC will not provide information on the status of Japan's nuclear power plants. For the latest information on NRC actions see the NRC's web site at [www.nrc.gov](http://www.nrc.gov) or blog at <http://public-blog.nrc-gateway.gov>.

### Two important reminders:

It is possible that some of us will be requested by colleagues in another country to provide technical advice and assistance during this emergency. It is essential that all such communications be handled through the NRC Operations Center. Any assistance to a foreign government or entity must be coordinated through the NRC Operations Center and the U.S. Department of State (DOS). If you receive such a request, contact the NRC Operations Officer (301-816-5100 or via the NRC Operator) immediately.

If you receive information regarding this or any emergency (foreign or domestic) and you are not certain that the NRC's Incident Response Operations Officer is already aware of that information, you should contact the NRC Operations Officer (301-816-5100 or via the NRC Operator) and provide that information.

Susan, from OCA, is helping us out in OPA and I've asked her to take this on for us. Susan – pls give him a call ... thank you all

**From:** Howe, Allen  
**Sent:** Wednesday, March 16, 2011 2:10 PM  
**To:** Harrington, Holly  
**Cc:** Ruland, William; Leeds, Eric  
**Subject:** FW: Draft Scheduling Note for Japan event 3-16-2011  
**Importance:** High

Holly – I appreciate the challenges you are facing right now with the blizzard of requests coming to your office. I am coordinating a Commission briefing on the Japan event to be conducted as early as Monday. The draft scheduling note is attached. We are reaching out to impacted offices to prepare for the brief. I have Eliot Brenner as a speaker to discuss communication challenges. What is needed is a POC who can engage in preparations to develop slides and talking points for Eliot. The POC is needed ASAP.

Thanks for your help - Allen

**From:** Howe, Allen

Thanks - Allen

## SCHEDULING NOTE

**Title:** BRIEFING ON JAPANESE EVENT and US RESPONSE (Public?)

**Purpose:** To provide the Commission a status on the recent event in Japan, and to provide an overview of staff actions to date, early planned actions

**Scheduled:** March XX, 2011  
9:00 am

**Duration:** Approx. 2 hours

**Location:** Commissioners' Conference Room OWFN

**Participants:** **Presentation**

**NRC Staff Panel** **50 mins.\***

**Bill Borchardt**, Executive Director for Operations **15 mins.\***  
Topic: Overview of Japanese Event and U.S. response

**Mike Weber**, Deputy Executive Director Materials, Waste, Research, State, Tribal and Compliance Programs **10 mins.\***  
Topic: Potential consequences; what will be seen in U.S.

**Marty Virgilio**, Deputy Executive Director for Reactor and Preparedness Programs **10 mins.\***  
Topic: Situation assessment for U.S. reactors and applicants

**Elliot Brenner**, OPA **5 mins.\***  
Topic: Communication Challenges

**Eric Leeds**, Director, NRR **10 mins.\***  
Topic: Path forward; Near term and longer term

**Commission Q & A** **30 mins.**

**Discussion – Wrap-up** **5 mins.**

**Break** **10 mins.**

**Closed session**

**Strategy and agenda planning**

Documents:

Staff background material due to SECY: March \_\_, 2011.

## Wittick, Susan

---

**From:** Wittick, Susan  
**Sent:** Wednesday, March 16, 2011 5:58 PM  
**To:** Deegan, George; Dion, Jeanne; Turtill, Richard; Rivera, Alison  
**Cc:** Piccone, Josephine; Jackson, Deborah; Moore, Scott  
**Subject:** RE: Assistance with Commission Brief

George,

Thank you for the input from FSME to include with Eliot's presentation.

Susan

**From:** Deegan, George  
**Sent:** Wednesday, March 16, 2011 5:39 PM  
**To:** Dion, Jeanne; Turtill, Richard; Rivera, Alison  
**Cc:** Piccone, Josephine; Jackson, Deborah; Moore, Scott; Wittick, Susan  
**Subject:** RE: Assistance with Commission Brief

Jeanne- Thanks.

Rich/Alison: Can FSME/DILR provide some talking points on the Communication Challenges we're having with States and other stakeholders (for Eliot Brenner's section). Once we have our message (bullets, talking points, background, possible Q&A's) I will provide this to Susan Wittick in OPA. We are probably looking at 2 minutes total out of Eliot's 5 minute presentation.

**From:** Dion, Jeanne  
**Sent:** Wednesday, March 16, 2011 5:28 PM  
**To:** Howe, Allen; Deegan, George  
**Cc:** Moore, Scott; Piccone, Josephine; Jackson, Deborah; Turtill, Richard; Brock, Kathryn; Frazier, Alan; Wittick, Susan  
**Subject:** RE: Assistance with Commission Brief

Yes- we can. We have staff with expertise in severe accidents (SOARCA) and health effects branch.

Can you provide more information on the agenda item ("advance our understanding of safety and risk")- RES is noted as the lead for the item.

Thanks- Jeanne

**From:** Howe, Allen  
**Sent:** Wednesday, March 16, 2011 5:22 PM  
**To:** Deegan, George; Dion, Jeanne  
**Cc:** Moore, Scott; Piccone, Josephine; Jackson, Deborah; Turtill, Richard; Brock, Kathryn; Frazier, Alan; Wittick, Susan  
**Subject:** RE: Assistance with Commission Brief

Thanks George – Susan Wittick is coordinating for OPA.

Jeanne – can RES address the consequence projections?

Thanks - Allen

**From:** Deegan, George  
**Sent:** Wednesday, March 16, 2011 5:18 PM  
**To:** Howe, Allen  
**Cc:** Moore, Scott; Piccone, Josephine; Jackson, Deborah; Turtill, Richard; Brock, Kathryn; Frazier, Alan  
**Subject:** FW: Assistance with Commission Brief  
**Importance:** High

Allen- I think our two emails may have crossed with one another (see my earlier response). I think RES would be best on Consequence Projections, not FSME. We may have some input to provide regarding Communication Challenges (since we serve in a liaison capability with States). If you'd like, I can check with our folks and see if they can develop some talking points to support Eliot's part of the presentation.

**From:** Howe, Allen  
**Sent:** Wednesday, March 16, 2011 5:09 PM  
**To:** Dion, Jeanne; Williams, Donna; Bajwa, Chris; Wittick, Susan; Shropshire, Alan; VandenBerghe, John; Deegan, George; Milligan, Patricia  
**Cc:** Meighan, Sean; Hall, Randy; Boska, John  
**Subject:** Assistance with Commission Brief  
**Importance:** High

I am looking for assistance to pull together background information, slides, key messages, talking points and possible Q&A for the Commission briefing on the Japan event. The briefing is likely to happen Monday. Looks like a busy weekend. A rough draft outline is attached with leads for the areas. Please keep in mind that the meeting will be public and the information will be at a fairly high level. If you know of a point of contact that is best suited to address the information, please let me know.

I am working to schedule a meeting tomorrow afternoon @1:30 to flesh this out. I will send out a scheduler with a bridge line.

Thanks - Allen

**From:** Janbergs, Holly  
**To:** Harrington, Holly  
**Subject:** House Hearing Update 2 (Chu Qs)  
**Date:** Wednesday, March 16, 2011 12:42:00 PM

---

#### First set of relevant Qs

Whitfield: IAEA's radiation scale, Japan vs. TMI – thoughts?

Chu: Events unfolding in Japan seem more serious than TMI. Conflicted reports make definitive statements difficult

Whitfield: Gov't entered into contracts re: Yucca, what can you tell me about the lawsuits there?

Chu: Will follow up and give exact number. It's an ongoing legal process

Rush: Can you assure the committee and American public that what's happening in Japan cannot happen here?

Chu: We'll look closely for lessons learned, but we don't believe there's any danger.

Upton: Is there anything Japan's asked for we haven't done?

Chu: Not to my knowledge

Waxman: I understand there are differences between Chernobyl, but could this happen here?

Chu: Yes, Chernobyl a different design. In Japan, we'll look for what went wrong, see if we can improve our systems.

Waxman: Do you think Congress should investigate?

Chu: I think investigation will happen naturally

Waxman: Naturally, but I think Congress has a responsibility for oversight, and we write the laws.

Waxman: Would nuclear power be competitive without government help (subsidies, loans, etc)

Chu: At the moment nuclear and renewables require subsidies to be competitive but we're trying to approach that problem

Shimkus: One of risks in Japan was decommissioned or offline plants had spent fuel storage pool that went dry, yes?

Chu: There've been conflicting reports

Shimkus: 11 pools within 40 mi of Chicago; wouldn't it make sense to have a central location?

Chu: Difference between pools as short term storage and Yucca as long term

Shimkus: Folks living near pools think it's pretty long term

Green: To jumpstart nuclear energy, we need loan guarantees. You mentioned \$36 billion, how many projects would that fund?

Chu: 6-8 projects, and if that can go forward there might be more confidence in private sector afterward

Green: In SOTU address Obama asked for 80% clean energy by 2035, if we stop going ahead with nuclear is that a possibility?

Chu: It would make things harder. I think a fraction needs to come from nuclear

I-200

Barton: Does Obama still support nuclear power?

Chu: he hasn't changed position on budget asking for loan guarantees, etc

Inslee: Republican budget means cuts in most places but nuclear, but we need diverse energy portfolio

Chu: We need research everywhere, just as we'd like to support engineering for small modular reactors we need a balanced approach for renewables

Inslee: Office of Civilian Radioactive Waste Mgmt has been shut down. My state paid \$300 mil for Yucca – we need a solution

Chu: Blue Ribbon Commission will have answers in June, we'll go forward from there

Matsui: What happens if there's a meltdown?

Chu: We don't want to speculate on exactly what'll happen, we'll take things as they come

Gardner: What's your level of communication with Japan?

Chu: In constant contact with Japan, both their officials and our presence on ground

Gardner: At this pt are you satisfied with their response?

Chu: We've gotten conflicting reports of what's going on, but as a country they take things very seriously, I don't want to say anything more except that we'll stand by and help as best we can.

Pitts: You said nuclear power should continue to be part of energy policy

Chu: Yes

Pitts: You eliminated office of Civilian Radioactive Waste Mgmt, admin has shut down Yucca... in light of situation in Japan does any of the current energy policy warrant reconsideration?

Chu: We shouldn't conflate what's happening in Japan with need for long-term repository; spent fuel pool storage is different

Pitts: At present how is admin fulfilling its obligation to deal with spent fuel?

Chu: Don't want to preempt what Blue Ribbon Commission is saying

Pitts: In light of events in Japan do you have any conclusions about how safe nuclear power is in US?

Chu: We will look at events in Japan and determine any lessons learned from impacts of multiple cascading events

Pitts: What is being done to monitor radiation?

Chu: DOE has airlifted equipment to Japan to help monitor and made that available, we have folks testing in air and ground over there; trying to maintain up to date info on radiation levels

Markey: As "banker-in-chief" to nuclear industry, from a financial risk perspective, do you think events in Japan make it likely folks will want to assume risks of investing in nuclear?

Chu: Events in Japan will cause people to reevaluate a lot and that's always good when it involves a commitment to maximize safety

Markey: Are you going to assess the risk premium you charge utilities?

Chu: A lot of factors get folded into the premium for nuclear plants

Markey: Should OMB reexamine the risk premium?

Chu: They'll probably include Japan in their consideration

Markey: I sent a letter a few days before earthquake discussing AP1000 design when I learned an NRC engineer John Ma said it may be too brittle to handle an earthquake and

may shatter like an egg, also had an unrealistic earthquake simulation. Isn't it risky to make loan guarantees to a design like this?

Chu: One condition of a loan is that it's dependent on NRC approval of the license, and that is still pending

Markey: Do you think we should hold off on new designs until we've gotten lessons learned from Japan?

Chu: I think no matter what happens we'll take lessons learned and apply them to both our current fleet and any actions in the future

Markey: Re: the AP1000 at Vogtle, taxpayers are on the hook for \$8.3 billion of that project, what happens if there is a default?

Chu: Our loan guarantee program tries to work specifics into the contract to ensure that doesn't happen, so there are assets in Southern Nuclear that...

Markey: Would we end up owning Southern Nuclear like we had to take over other companies in the last few years?

Chu: I'll have to get you details on that

Markey: Taxpayers must be protected

DeGette: Multiple failsafe systems in Japan, even technologically advanced ones, can't really prevent/prepare for everything

Chu: We're developing tools to get a better handle on multiple cascading effects, there's always an eye to increasing safety

DeGette: One of the questions we really need to explore is whether we have the kind of modeling we need to develop nuclear power safely in this country.

Bilbray: This reactor is not state-of-the-art, technology has changed in the last forty years. There are big differences to our reactors here in CA, when we talk about tsunamis – at San Onofre our surge wall is 3x what it was there, and at Diablo Canyon it's 8x

**To:** Harrington, Holly  
**Subject:** House Hearing Update 1  
**Date:** Wednesday, March 16, 2011 12:15:00 PM

---

Opening Remarks:

Whitfield:

- nuclear energy plays a vital role in our country
- we need to maximize safety and learn from what happens in Japan

Rush:

- Republican budget cuts
- support nuclear energy but not at the expense of other energy projects
- nuclear industry needs to be as transparent as possible

Shimkus:

- budget
- nuclear waste repository needs to be a priority

Waxman:

- a lot of wakeup calls in the last year that tells us we need to revise energy policy
- Republican budget cuts

Green:

- need to produce clean energy at reasonable cost

Upton:

- nuclear should be part of energy mix
- doe budget needs to be examined carefully
- reducing need for onsite storage will reduce risk for nuclear plants
- Yucca Mountain or other repository needs to become reality

Markey:

- we're not moving fast enough on KI; Obama admin needs to enforce KI laws
- taxpayers can't be on the hook for investments in nuclear plants

Chu:

- doe actions: experts, teams, monitoring equipment
- budget supporting Obama's clean energy goals

-----Original Message-----

From: [info@ecologicalinternet.org](mailto:info@ecologicalinternet.org) [<mailto:info@ecologicalinternet.org>] On Behalf Of Alessandro Giustarini  
Sent: Wednesday, March 16, 2011 10:03 AM  
To: OPA Resource  
Subject: Please immediately close older reactors for inspection

Dear U.S. Nuclear Regulatory Commission,

Given the worsening Japanese nuclear disaster, I am writing to demand immediate closure of U.S. nuclear energy facilities that remain operational after having exceeded their engineered operable life. Please immediately close these facilities for inspection in an orderly manner as is occurring in Europe. It is the prudent thing to do given many older reactors in the U.S. are of similar design as those melting down in Japan.

Japan is facing the worst nuclear crisis since the atomic bombing of Hiroshima and Nagasaki. Multiple explosions have hit the Fukushima Daiichi nuclear plant, several reactors have lost their cooling systems, raising fears of meltdown(s). Radiation levels have been detected as far as 100 miles away. Many people have tested positive for radiation exposure, and hundreds of thousands of have been evacuated, with the numbers expected to rise.

In the United States, some reactors which have recently had their licenses extended nearly 40 years old, and their owners are asking the Nuclear Regulatory Commission for approval to extend their lives. No further extensions should be granted, and these older reactors that have been extended must be taken off line immediately and inspected given recent happenings in Japan. Clearly these 1970s vintage era systems were not adequately engineering for infrequent but large natural disasters and increasingly human exacerbated events.

Further, it is presumptuous for the federal government to be planning to provide for \$36 billion in loan guarantees to build still more nuclear plants, when we do not yet have a permanent waste repository, or even a plan. We are dooming civilizations for hundreds of thousands of years to

II-208

having to protect and maintain enclosure upon our nuclear waste. Nuclear waste stored on site has caught fire in Japan, and the current on site storage across America is completely unacceptable.

All existing nuclear energy plants, waste and weapons are accidents waiting to happen. Nuclear complexity, potential ecological costs, natural disasters and a conflict ridden world show can never be safe. The price of nuclear fission is potentially enormous when even one accident happens, must less several as now with our Japanese brothers and sisters. In a continually more disorderly world, it is clear that no nuclear materials are secured, and that developing countries embracing nuclear energy will lead to weapon proliferation and yet more great loss of life from accidents and war. Be we could choose to ban nuclear materials in their entirety.

It is time for humanity to choose which technologies they allow based upon full preponderance of the evidence - and as an ecologist I would predict all but certain similar impacts no matter the effort from the introduction of geo-engineering, genetically modified organisms (particularly food), nanotech, etc. Nuclear fission has been shown to be deadly in the field of battle, along the coastal plains, it's unsecured wastes are growing, and through terrorist and militaristic rhetoric regarding their use in an increasingly unstable world.

Please immediately cease extending the licenses of old nuclear power plants, and shut down for inspection those which have been extended. Some technologies at their root are anti human and Earth. Let's get it done, ban the bomb, ban nuclear energy, and commit to climate and energy solutions that are serious and include life-saving energy conservation, efficiency & using only true renewables. This will soon be the only energy at our disposal if we desire a habitable Earth, and we must transform our society accordingly.

With grave concern,

I-240

**From:** Operations Center Bulletin  
**To:** Operations Center Bulletin  
**Subject:** UPDATE: NRC IS RESPONDING TO JAPANESE EVENTS  
**Date:** Wednesday, March 16, 2011 10:41:17 AM

---

## **THIS IS NOT A DRILL**

**The Office of Public Affairs is expecting a large volume of calls from media and the general public regarding the latest statements from the State Department and the NRC regarding the situation in Japan. ALL CALLS from media or the general public on this topic must be referred to the 301-415-8200 number.**

The NRC is coordinating its actions with other Federal agencies as part of the U.S. government response to the events in Japan. The NRC is examining all available information as part of the effort to analyze the event and understand its implications both for Japan and the United States. The NRC's Headquarters Operations Center in Rockville, MD has been stood up since the beginning of the emergency in Japan and is operating on a 24-hour basis.

NRC Incident Responders at Headquarters have spoken with the agency's counterpart in Japan and offered the assistance of U.S. technical experts. NRC representatives with expertise on boiling water nuclear reactors have deployed to Japan as part of a U.S. International Agency for International Development (USAID) team. USAID is the Federal government agency primarily responsible for providing assistance to countries recovering from disasters.

U.S. nuclear power plants are built to withstand environmental hazards, including earthquakes and tsunamis. Even those plants that are located outside of areas with extensive seismic activity are designed for safety in the event of such a natural disaster. The NRC requires that safety significant structures, systems, and components be designed to take in account the most severe natural phenomena historically estimated for the site and surrounding area.

The NRC will **not** provide information on the status of Japan's nuclear power plants. For the latest information on NRC actions see the NRC's web site at [www.nrc.gov](http://www.nrc.gov) or blog at <http://public-blog.nrc-gateway.gov>.

### **Two important reminders:**

It is possible that some of us will be requested by colleagues in another country to provide technical advice and assistance during this emergency. It is essential that all such communications be handled through the NRC Operations Center. Any assistance to a foreign government or entity must be coordinated through the NRC Operations Center and the U.S. Department of State (DOS). If you receive such a request, contact the NRC Operations Officer (301-816-5100 or via the NRC Operator) immediately.

If you receive information regarding this or any emergency (foreign or domestic) and you are not certain that the NRC's Incident Response Operations Officer is already aware of that information,

I-211

you should contact the NRC Operations Officer (301-816-5100 or via the NRC Operator) and provide that information.
